## FOREWORD

[\(TOC\)](#)

**By H.E. Minister of Planning, Cambodia**

The General Population Census of Cambodia 1998 conducted for the first time in 36 years has produced a variety of data. These include not only the population figures but also a plethora of information on the demographic, socio-economic and cultural aspects of the population. All these data require in-depth study, the results of which when disseminated, would prove useful to the line Ministries and other users, in planning for development of Cambodia. I am glad to note that with this end in view the UNFPA, the funding agency for the census, had thoughtfully included analysis and dissemination as an important post-census activity in the census project.

We express our deep sense of gratitude to HE Sar Kheng, Deputy Prime Minister and Co-Minister, Ministry of Interior who is the chairman of the National Census Committee and other members for their guidance from time to time. We thank HE Chea Chanto, former Minister of Planning and chairman of the Technical Committee for the census who co-ordinated and guided the census operations. We are thankful to HE Suy Sem former Acting Minister of Planning for the keen interest he took in post-census activities. Our thanks are also due to the members of Technical Committee for the Census and the National Steering Committee for Census Information and Education Campaign. The census operations were carried out mostly with the help of the Province Census Committees headed by Governors of Provinces. We thank the Governors and the members of the Provincial Census Committees for their assistance. The Press, the radio and the TV played a very important role in census publicity and our thanks are due to them.

We wish to place on record our gratitude to the United Nations Population Fund (UNFPA) and in particular its successive Representatives in Cambodia, Dr. Vincent Fauveau, Mr. Hedi Jemai and Ms Yoshiko Zenda for providing the necessary funding and technical assistance. We also thank the staff of UNFPA office Cambodia for their continued assistance. We are grateful to the United Nations Department for Economic and Social Affairs (DESA) for their co-operation in executing the project. We thank the UNDP for providing funds for census vehicles, computers and other equipment and the UNESCO for successfully implementing the advocacy and public information campaign for the census. We thank the advisers of UNFPA/CST and ESCAP who have assisted the national staff in analyzing the census results. Our thanks are due to Mr. Nott Rama Rao, Chief Technical Adviser, Mr. Harry Lode, Data Processing Adviser and other staff of the Census Project for their constant assistance and guidance.

The success of the census operations is mainly due to the teamwork in the census organisation itself. The Census of Cambodia is a massive administrative-cum-statistical exercise and its completion has been possible with the total help and co-operation received from one and all. The major share of the credit for the success of the census should go to the people of Cambodia themselves and to the large number of devoted, hard working and loyal enumerators, supervisors, village chiefs, commune, district and province census officers and their colleagues, Regional and Assistant Regional Officers and other staff of NIS and Ministry of Planning drafted for census as well as data processing work.

HE Lay Prohas, Secretary of State, Ministry of Planning has been ably co-ordinating the activity of the census project. HE Hou Taing Eng, former Director and HE San Sy Than, present Director, NIS, Mr. Seng Soeun, Deputy Director, NIS, and their colleagues have greatly assisted in the various census activities. Thanks are due to each of them.

I am sure this report would be welcomed by the various Ministries and Departments of the Royal Government of Cambodia as well as donors, international agencies, NGOs and other data users.

**FOREWORD**  
**By H.E. UNFPA Representative, Cambodia**

[\(TOC\)](#)

The final census results were released in September 1999 when I had just arrived in Cambodia to take up my new responsibilities. Since then the staff of the NIS and Ministries concerned had undertaken further in-depth analysis of the census data. This was done in workshops conducted separately for each topic under the guidance of advisers from UNFPA CST and ESCAP. Earlier, UNFPA had funded the training of national staff by UNFPA/CST, at Bangkok on latest techniques of demographic analysis. I have been in close touch with the census office during the analysis stage and I am deeply impressed by the tenacity and commitment on the part of the staff in their efforts to accomplish this task well.

I am very glad to take this opportunity to record on behalf of UNFPA which has funded the census and on my own behalf, our congratulations to the Royal Government of Cambodia and the national staff concerned for their effort and interest in successfully conducting the census and publishing the results quickly through various analytical reports. I am thankful to UNFPA/CST for all the assistance provided in this regard. I am particularly grateful to the Advisers who worked closely with the international and national staff of the census project. I am sure the census analytical reports would go a long way in planning for development of Cambodia.

	Males	54.4
	Females	58.3
	Urban	60.0
	Rural	55.8

## BACKGROUND OF THE 1998 POPULATION CENSUS

### 1.1 The 1998 Census

The General Population Census of Cambodia was conducted in March 1998. It revealed a population of 11.4 million. No census was conducted in Cambodia after 1962 due to war and political disturbances. According to the 1962 Census, the population of Cambodia was 5.7 million. Technical assistance and funding for the 1998 Census as well as for the preparatory activities from 1995 onwards, was provided by the UNFPA. The Geographical frame for the 1998 census followed the defined structure of province, district, commune and village. There are 24 provinces in the country, which include the municipality of Phnom Penh and the "Krong" or "Towns" of Preah Sihanouk, Kaeb and Pailin. These provinces are divided into 183 districts, which are subdivided into 1,609 communes containing 13,406 villages. Census enumeration covered the entire inhabited geographical areas with the exception of a few areas in the northwestern provinces bordering Thailand, which were inaccessible during the census due to military operations. The population in these excluded areas is estimated to be about 45,000. The refugee population, temporarily displaced to Thailand, was not included in the census as it was conducted on a de facto basis.

The 1998 Census was held under the authority of a Royal Decree on the organization of the General Population Census of Cambodia. According to this Decree, the Ministry of Planning is responsible for the General Population Census with the National Institute of Statistics (NIS) as the implementing agency. The Decree inter alia ensures confidentiality of personal information collected in the census.

The National Committee for the General Population Census of Cambodia, under the chairmanship of HE Deputy Prime Minister and Co-Minister, Ministry of Interior, had the responsibility for instructing, deciding and endorsing all general items of work pertaining to the census. The Census Technical Committee with HE Minister of Planning as chairman dealt with technical issues relating to the census. In the conduct of the census, the population census office of the National Institute of Statistics (NIS) under the Director of Census was the central unit that served as the monitoring, communication and action center for the census.

### 1.2 Census Questionnaires

Two questionnaires were used in the 1998 Census of Cambodia (see Annexes 1 and 2). These were called: Form A: Houselist and Form B: Household Questionnaire. Form A: Houselist which was canvassed during the preliminary round was used to collect the following information in respect of buildings which had households in them: Building/ Structure number, predominant construction material of wall, roof and

floor of building, whether building is wholly or partly residential, household number, and name and sex of head of household and number of persons usually living in the household.

Form B: Household Questionnaire had four parts:- Parts 1, 2, 3, and 4. This was used for census enumeration during March 3 to 12, 1998 in all households. In Part 1, information on usual members of household present on Census Night (March 3, 1998), visitors present on the Census Night and usual members absent on Census Night was collected.

Part 2 of Form B, was used to collect the following information in respect of each usual member of household present and each visitor to household: Full name, relationship to head of household, sex, age, marital status, mother tongue, religion, birth place, previous residence, duration of stay, reason for migration, literacy, full time education and economic characteristics.

In Part 3 of Form B, fertility information of females aged 15 and over in the household was collected. In Part 4 of Form B, following information was collected on housing conditions and facilities: basis of occupancy of the dwelling by the household (like owner occupied or rented), main source of light available to the household, main cooking fuel used by household, whether toilet facility was available within premises, main source of drinking water supply for the household and number of rooms occupied by the household.

### **1.3 Census Publicity** [\(TOC\)](#)

For successfully conducting the census in a country, which did not have a census for a long time, people had to be informed well in advance about the scope and purposes of the census to get their co-operation. They had to be requested to co-operate by giving truthful information. The enumerators had to be requested to record correctly the information given by respondents. The public had to be convinced that the information collected in the census would be kept confidential. To achieve all these, a complementary project called “Advocacy and Public Information Campaign for the Population Census” (CMB/97/P08) was executed by UNESCO with UNFPA funding.

### **1.4 Census Enumeration**

About 25,000 enumerators and 8,350 supervisors, drawn mostly from teachers were specially trained for carrying out the enumeration by visiting each and every household. The census was conducted on a *de facto* basis. The census was spread over a period of ten days from March 3 to 12, the census reference time being the midnight (00 hours) of March 3, 1998. It covered all persons staying in Cambodia at the reference time including foreigners. Foreign diplomatic corps and their families, were, however, excluded. Special arrangements were made to enumerate homeless population, those staying in hotels and guesthouses, transient population and those living in boats on the night of March 2, 1998. The census was preceded by the preliminary operation of houselisting during February 27 to March 2, 1998.

## 1.5 Data Processing

[\(TOC\)](#)

The main post-census activity of the Data Processing Division was the manual coding and editing of census documents, data entry from the questionnaires, computer editing and tabulation and the generation of various dissemination products.

The manual coding and editing of the census documents was done in two stages. First, the summary statements were scrutinised and edited. This provided the basis for the provisional census results. The second stage concentrated on the coding, editing and data entry of the main census questionnaire (Form B).

Computer editing was performed to remove errors and inconsistencies in the data sets. A large number of statistical tables were generated at various geographical levels.

## 1.6 About this Report

The present report contains an analysis of labour force and employment. Information on activity status, employment status, employed and unemployed were collected for all persons in Part 2 of Form B: Household Questionnaire. This formed the basis for the analysis contained in this report. The census priority tables which constituted the main source of data for this report and the supplementary tables specially generated for the analysis may be found in Annexes 3 and 4 (at national level only).

Economically active population is by definition the employed and unemployed population among those aged 7 years and over. Population in the age group 0-6 is considered as economically inactive. This definition has been adopted throughout the report. However, in all priority tables related to economic characteristics, population in the ages 5 and 6 have been classified as employed, unemployed and economically inactive, for additional information. The employed and unemployed population in ages 5 and 6 work out to only 0.02 per cent (1,066 children) which is negligible. It should be noted that this number is included in the following tables which have no age break-down:-

Text Tables: Table 2.7 to Table 2.15

Priority Tables: Table B4, Table B8, Table B12, Table B15 and Table B19

CST Tables: CST-6

The results were discussed thoroughly at two in-country workshops conducted by advisers from UNFPA/CST, and ESCAP. Trained national staff of NIS and Ministry of Social Affairs, Labour, Vocational Training and Youth Rehabilitation participated in the workshops. The international staff of the census project assisted in organizing the workshop and coordinating follow-up activities.

## Population and Labour Force of Cambodia, 1998

[\(TOC\)](#)

<b>Total population</b>	<b>11,437,656</b>
Ages 0-6	2,212,035
Ages 7 and over	9,225,621
<b>Economically active population</b>	<b>5,117,879</b>
Employed	4,844,696
Unemployed	273,183
<b>Economically inactive population</b>	<b>6,319,777</b>
Ages 0-6	2,212,035
Ages 7 and over	4,107,742

## Concepts and Definitions

### **Economically active population (or labour force)**

The employed and unemployed population among those aged 7 years and over. Persons were categorized in the census as employed or unemployed based on their main economic activity during the 12 months preceding the census. The main activity was that in which a person was engaged for 6 months or more. In this report, the terms economically active population and labour force have the same meaning.

### **Economically inactive population**

The population that was neither employed nor unemployed, i.e., who were not working, not available for work and not seeking work. In the census questionnaire, they were categorized as (i) homemaker; (ii) student; (iii) dependent; (iv) rent-receiver, retired or other income recipient; or (v) other.

### **Employed population**

Persons who worked or held a job for at least 6 months in the past 12 months.

### **Unemployed population**

Persons who, for at least 6 of the past 12 months, were not working but who were available for work or were seeking work. In the census questionnaire these were categorized as those who had worked before and those who had never worked before.

**Crude activity rate**

The economically active population as a percentage of the total population.

**General activity rate**

The economically active population as a percentage of the population aged 7 years and over.

**Age-specific labour force participation rate**

The economically active population in a specific age or age group as a percentage of the total population in that age or age group.

**Industrial sector**

Industry refers to the activity of the establishment or enterprise in which a person works. Industries may be grouped according to the following sectors:

*Primary sector*

Agriculture, hunting and forestry; Fishing

*Secondary sector*

Mining and quarrying; Manufacturing; Electricity, gas and water supply; Construction

*Tertiary sector*

Wholesale and retail trade and repair of motor vehicles, motorcycles and personal and household goods; Hotels and restaurants; Transport, storage and communication; Financial intermediation; Real estate, renting and business activities; Public administration and defense; Compulsory social security; Education; Health and social work; Other community, social and personal service activities; Private households with employed persons; Extraterritorial organizations and bodies.

**Occupation**

Occupation refers to the type of work that an individual performs.

## CHAPTER II

### LABOUR FORCE AND EMPLOYMENT

#### 2. Introduction

##### 2.1. Background

According to the 1998 Population Census of Cambodia the population was about 11.4 million, 48.2 per cent males and 51.8 per cent females. Approximately 84.3 per cent of the population lives in rural areas. The average population density is 64 persons per square kilometre.

Cambodia has a young population with 42.8 per cent between the ages of 0 and 14 and only 3.5 per cent aged 65 and over. The dependency ratio (Percentage of the Population in the younger age groups (0-14) and older age groups (65+), to the population in the age group (15-64) is 86.1, 69.1 and 89.7 for Cambodia, urban areas and rural areas, respectively. The sex ratio is 93.0 for Cambodia and for urban and rural areas is 95.7 and 92.5, respectively.

The labour force of a country reflects its economy. The per capita gross national product of Cambodia is US\$ 276. The level of development of the Cambodian economy is reflected by the fact that more than three fourths of the employed population work in agriculture, 18 per cent in the tertiary sector and only four per cent work in the secondary sector. Only one worker in 600 is an employer and only one in eight is a paid employee. Most of them are own-account workers or unpaid family workers.

##### 2.2. Scope and Limitations

The concepts and definitions of the economically active population used in the 1998 Population Census of Cambodia are presented on page 4. It may be noted that in this report the terms economically active population and labour force have the same meaning and are used interchangeably.

Although the Population Census collected information on the economic activity of persons aged 7 years and above, that does not imply that 7 is the normal age of entry into the workforce. That information was collected in order to assess the extent and nature of child labour in the country. The age 13 years would be a more realistic minimum labour force age. That age is used to define the labour force in Thailand and Viet Nam, for example. In Cambodia, 5 per cent of persons aged 13 years are employed, and the proportion employed is much smaller at younger ages.

It may be noted that according to the procedures followed in the Census, economically active persons may also be recorded as currently attending school. However, those persons whose main activity in the previous 12 months was "student" are not considered to be in the labour force.

## 2.3. Labour Force Participation

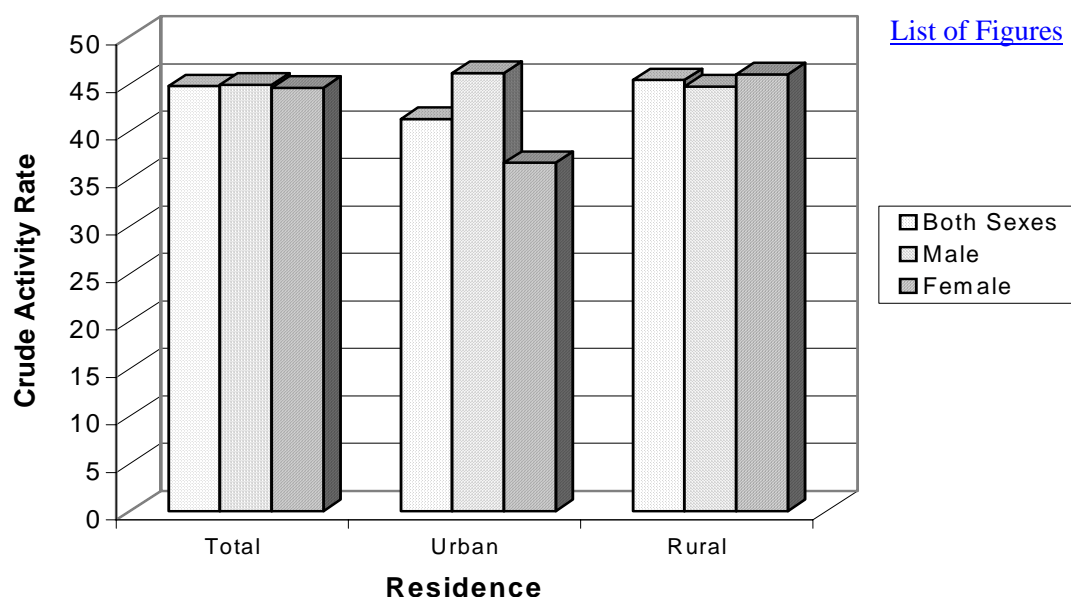

### 2.3.1 Economically Active Population

It may be seen from page 4 that 5.1 million persons, or 45 per cent, of the total population of 11.4 million are in the labour force. As no children aged 0-6 years are considered to be economically active, and only small percentages of those ages 7-14 years are in the labour force, the labour force participation rate is higher when only older ages are considered. Thus, 55 per cent of the population aged 7 years and over and 77 per cent of the population aged 15 years and over are economically active (Table 2.2).

Male labour force participation rates exceed those of females but because females constitute 51.6 per cent of the total population they outnumber males in the labour force by 165,279. (Table 2.1)

Table 2.2 shows that the male crude activity rate is 44.9 and the female rate is 44.6. The crude activity rate in urban areas is 46.1 per cent for males and 36.7 per cent for females (Table 2.2). In rural areas, however, the crude activity rate for males and females is 44.7 and 46.0 per cent, respectively. The lower rate for males is chiefly attributable to the larger number of males under age 15 and, thus, mostly not active.

**Figure 2.1 Crude Activity Rate by Residence and Sex**

Labour force participation rates are much higher in rural than in urban areas, especially for women and especially for persons under age 30. The reason for this differential is the higher participation of women in unpaid family work in rural areas, especially in agriculture activities. Among the population aged 15 years and over, 79.3 per cent of rural residents and 65.9 per cent of urban residents are economically active. Among females aged 15 years and over, 76.8 per cent of those

in rural areas and 56.8 per cent of those in urban areas are in the labour force (Table 2.2).

Figure 2.1 shows the crude activity rate by residence and sex. It shows that the crude activity rate of urban males is greater than that of rural males.

**Figure 2.2 Labour Force Participation Rate by Age, Sex and Residence**

[List of Figures](#)

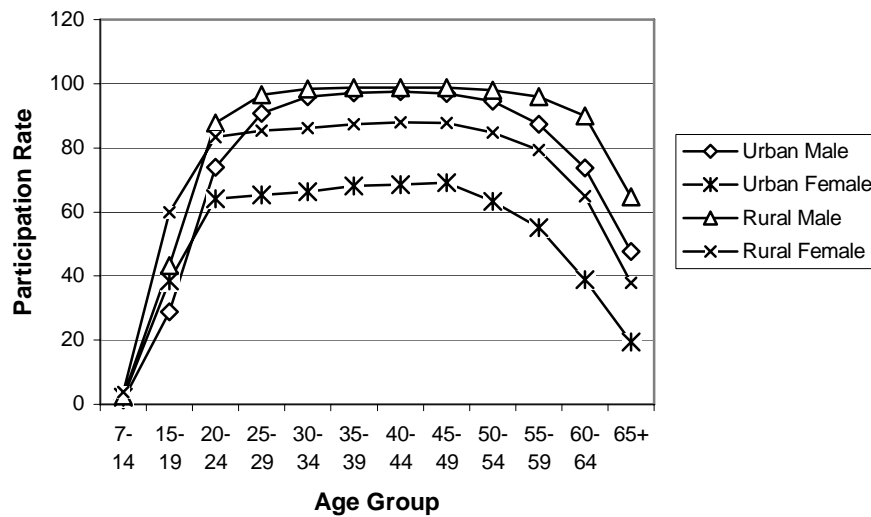

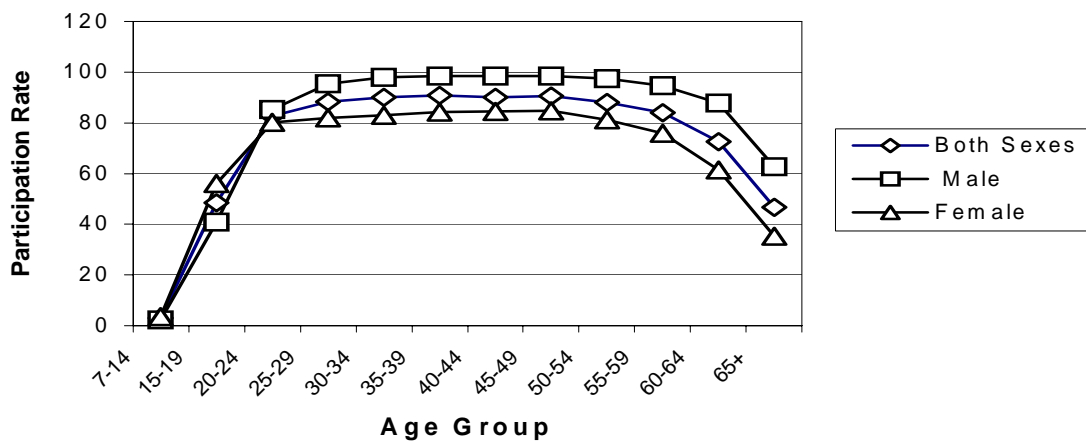

Figure 2.2 shows labour force participation rates by age, sex and residence. It shows that between the ages of 35 to 49 the labour force participation rate for rural males is only slightly higher than for urban males. For females the rural participation rate is much higher than urban areas at all ages. At ages 50 and over, the participation rates of rural males are higher than the urban participation rates. It may also be noted that male participation rates are higher than female participation rates in all age groups 25 and over in both urban and rural areas.

Figure 2.3 shows age-specific participation rates by sex. Starting from a low rate at

**Figure 2.3 Labour Force Participation Rates by Age and Sex**

[List of Figures](#)

ages 7-14 years ( 3.0 per cent for both sexes), it rises with advancing ages until the peak at ages 35-39 years (90.8 per cent for both sexes) and then declines gradually until ages 65+ (46.6 per cent for both sexes). For males it starts from 2.4 per cent at the age group of 7-14 and rises with advancing age until the peak at ages 40-44 (98.5 per cent) and then declines until age 65+ (62.6 per cent). For females it starts from 3.6 per cent at the age group of 7-14 and rises with advancing age until the peak at ages 45-49 (84.7 per cent) and then declines until age 65+ (35.2 per cent).

Source: Table B1

At young ages, higher proportions of girls than boys are in the labour force. In the age group 15-19 years, 56.2 per cent of girls and 40.8 per cent of boys are economically active.

Adult labour force participation rates are high. Over 95 per cent of males between the ages 25 and 54 are economically active. Over 80 per cent of females between the ages of 20 and 54 are economically active. High proportions of adults remain economically active even at older ages. Nearly two thirds of males and over one third of females aged 65 years and over remain in the labour force (Table 2.2).

Source: Table B1

Although labour force participation rates are high, significant proportions of the labour force are unemployed. Overall, 5 per cent of the labour force is unemployed, and the unemployment rate is 9 per cent in urban areas. It appears to be more difficult for females than males to find employment, especially in urban areas. The overall unemployment rate of females is nearly 6 per cent, compared with 5 per cent among males. In rural areas the unemployment rates of males and females are not much different but in the urban areas, the female unemployment rate (12.18 per cent) is much higher than that of males (6.69 per cent) (Table 2.3).

Rural	95.31	95.67	94.99	4.69	4.33	5.01

Source: Table B1

Table 2.4 indicates that married persons have the highest economic activity rates, but that is largely a function of age; the never-married population includes a large number of persons aged 15-19 years who have not yet entered the labour force.

The pattern of labour force participation by marital status is somewhat different for women than men. Among women, those who are separated have labour force participation rates significantly higher than those who are currently married. Presumably, separated women are required to work for their economic livelihood. But in the case of men the opposite is true. Among men, those who are separated have lower labour force participation rates than those who are currently married. The reason for this may be that separated men are not required to work for their economic livelihood, they can stay with their parents or relatives wherever they prefer. It may also be noted that while all women and married women have unemployment rates significantly higher than their male counterparts, divorced and separated women have unemployment rates lower than their male counterparts (Table 2.4). Among the single men and women unemployment rates are higher probably because they wait for suitable jobs. This is not the case with the married people.

**Table 2.4. Economic Activity Rate and Unemployment Rate of Population Aged 15 Years and over by Marital Status and Sex.** [List of Table](#)

Sex	Total	Never-married	Married	Widowed	Divorced	Separated

Source: Table CST-5.

Unemployment rates by level of education, age group, residence and sex are shown in Table 2.5. The unemployment rates for the literate persons and illiterate persons are almost the same (5.1 and 5.5 per cent respectively) for the country. Similarly, the unemployment rate for urban literate persons and illiterate persons is almost the same (9.1 and 9.8 per cent respectively). The unemployment rate in rural areas is almost the same (4.7 per cent) for both literate and illiterate persons. This shows that in rural areas a person can get job even though he or she is not a literate person. It is also noticed that the higher the educational level the lower is the unemployment rate, except for undergraduates. This is true for both urban and rural areas.

Age-specific unemployment rates show that the highest unemployment rate is in the age group 15-19. The unemployment rate of females in this age group is 14.7 per cent and the male unemployment rate in the same age group is 16.4 per cent. In urban areas these rates are as high as 24.6 per cent for females and 21.8 per cent for males but in rural areas they are only 13.3 for females and 15.6 for males. For all levels of education the highest unemployment rate can be found in the age group 15-19. One reason for the higher unemployment rate of males in rural areas is likely to be that they are choosing a job, which is suitable to their level of education.

### 2.3.2. Economically Inactive Population

Because of the young age structure of the Cambodian population, more than half of those persons not economically active are dependents (Table 2.6). More than one third of the inactive population (43 per cent of males and 41 per cent of females) are students. As expected, students constitute a higher proportion of the economically inactive population in urban (43 per cent) than rural (36 per cent) areas. Only 14 per cent of economically inactive females are homemakers, although 25 per cent of inactive females in urban areas are homemakers and 12 per cent of inactive females in rural areas are homemakers.

## 2.4. Job Characteristics

### 2.4.1. Industry

In a description of the labour force, industry refers to the type of establishment or enterprise in which an individual works, rather than to the type of work that person does, which is his or her occupation.

#### 2.4.1.1. Proportional distribution

The labour force of Cambodia is overwhelmingly agricultural, with over 77 per cent in the primary sector, which includes agriculture, forestry and fishing. Only 4 per cent of employed persons work in the secondary sector of mining, manufacturing, utilities and construction. Eighteen per cent work in the tertiary, or services, sector (Table 2.7).

Even in urban areas, only 11 per cent of the workforce are in the secondary sector, although 55 per cent work in the services sector. Females in both urban and rural areas are much more likely than males to work in the primary sector, and consequently less likely to work in either the secondary or tertiary sectors (Table 2.7).

**Table 2.7 Percentage Distribution of Employed Persons by Industrial Sector, Sex and Residence**

<i>Industrial Sector</i>	<i>Total</i>			<i>Urban</i>			<i>Rural</i>		
	<i>Both Sexes</i>	<i>Male</i>	<i>Female</i>	<i>Both Sexes</i>	<i>Male</i>	<i>Female</i>	<i>Both Sexes</i>	<i>Male</i>	<i>Female</i>
Number	4,845,762	2,360,107	2,485,655	673,612	378,080	295,532	4,172,150	1,982,027	2,190,123
%	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

Source: Table B12

Note: Persons for whom industry was not reported are distributed proportionately.

**Figure 2.4 Percentage Distribution of Employed Persons in Urban and Rural areas by Industrial Sector**

[List of Figures](#)

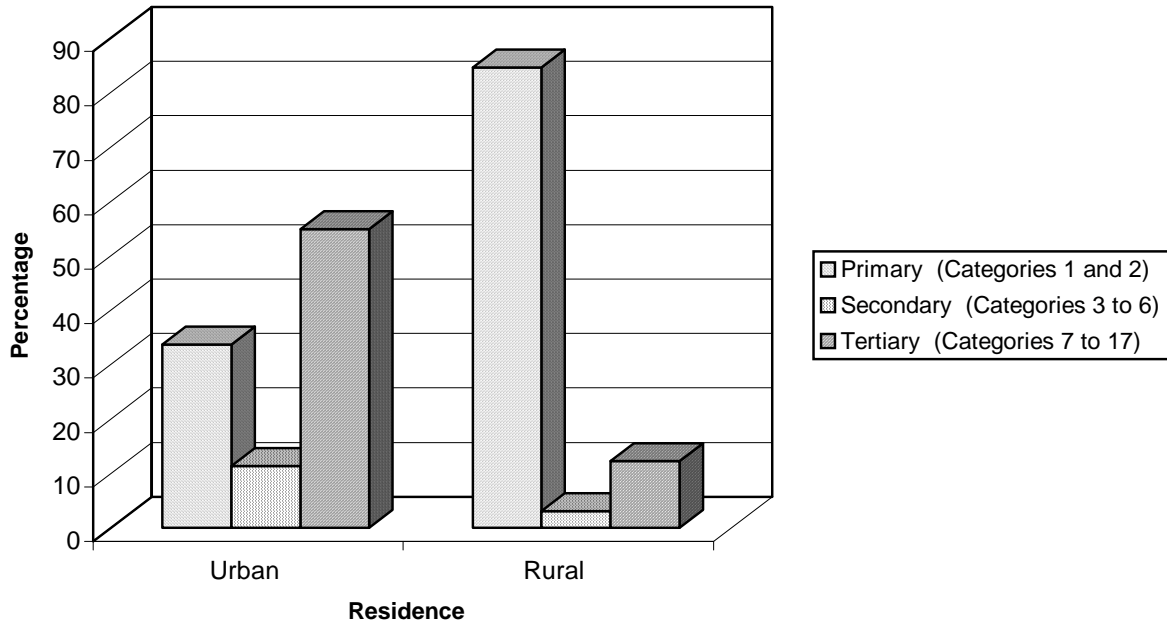

Figure 2.4 shows that the percentages of workers employed in the primary sector in rural and urban areas are 84.6 and 33.7, respectively. The percentages in the secondary sector in rural and urban areas are 3.1 and 11.4. The percentage in the tertiary sector in rural areas is 12.3 and in urban areas is 54.4. Thus the highest percentage of employed persons in rural areas is in the primary sector but for urban areas the highest percentage of employed persons is in the tertiary sector.

When employment is examined by individual industries, as in Table 2.8, it may be seen that women predominate in several industries. Slightly higher proportions of employed women than employed men work in manufacturing, hotels and restaurants, and in private households. About twice as many women as men work in wholesale and retail trade

For the whole country, the highest percentage of employed persons was engaged in agriculture, hunting and forestry (76.1 per cent), followed by trade (6.9 per cent), public administration and defense (4.6 per cent), manufacturing (3.1 per cent), transport (2.4 per cent), education (1.7 per cent), fishing (1.5 per cent), and services (3.1 per cent). The percentages in other industries were less than 1 per cent of the total employed persons. It is also noticed that in urban areas 31.6 per cent of employed persons are in agriculture (Table 2.8). This may be because most urban areas have land for cultivation.

Note: Persons for whom industry was not reported are distributed proportionately

2.4.1.2. *Industry by Marital Status and Sex*

[\(TOC\)](#)

Table 2.9 shows that most employed persons are married. This percentage is over 75 for males in both primary and tertiary sectors. Among females, over 60 per cent in both these sectors are married. In each of the sectors, primary and tertiary, the difference between the percentages of never-married among males and females is rather small. In secondary sector, however, single females constitute a much higher percentage (51.83 per cent) than single males (31.24 per cent). It is also noticed in the secondary sector that in the case of males, the proportion of married is higher than that of never married, whereas in the case of females the opposite is true. The proportion of employed women who are widowed in tertiary sector is twice that in secondary sector. Further, among employed women in tertiary sector, the percentage of widowed is significantly higher than that of divorced and separated. In each industrial sector, the proportion of widowed, divorced, or separated is higher among women than men.

**Table 2.9. Percentage Distribution of Employed Males and Females in Each Industrial Sector by Marital Status**

[List of Table](#)

<i>Sector</i>	<i>Total</i>		<i>Marital status</i>				
	<i>Number</i>	<i>Per cent</i>	<i>Never Married</i>	<i>Married</i>	<i>Widowed</i>	<i>Divorced</i>	<i>Separated</i>
Cambodia - Total							
Male	2,347,929	100	20.16	77.78	1.16	0.75	0.15
Primary sector	1,682,194	100	18.84	78.99	1.30	0.72	0.14
Secondary sector	118,151	100	31.24	66.92	0.80	0.86	0.18

Secondary sector	86,222	100	51.83	37.93	5.61	4.06	0.57
Tertiary sector	331,586	100	22.68	60.71	10.33	5.54	0.74

Source: CST-6

Note: Excludes persons for whom industry was not reported.

Table 2.10 shows the percentage distribution of employed women in each industrial category by marital status. In the manufacturing category, single women form the highest proportion. Apparently the preferences of employers and the requirements of the work in manufacturing mean that it is difficult for married or older women to work in that industry. Single women are also more likely than other women to work in several of the services industries, including in hotels and restaurants, and in private households.

Source: Table B19

Note: Persons for whom industry was not reported are distributed proportionately

In mining and quarrying, wholesale and retail trade, other community and private households, widows account for over 10 per cent. Among those working women in the above industrial categories the proportions of divorced are also high, but less than proportion of widowed women.

#### 2.4.2. Occupation

[\(TOC\)](#)

##### 2.4.2.1. Percentage Distribution

When the labour force is examined by occupation, the predominance of agriculture is apparent. By occupation, 82 per cent of women and 70 per cent of men are agricultural or fishery workers (Table 2.11). Only 5 per cent of the workforce are service and sales workers, with another 5 per cent in elementary occupations. Less than 4 per cent of the labour force are in other occupational groups.

About one third of the workers in urban areas are agricultural workers. This finding reflects the fact that cities also contain areas that are agricultural in nature. For the purposes of the Census, urban areas comprise all of Phnom Penh, Krong Preah Sihanouk, Krong Kaeb and Krong Pailin, plus the districts containing provincial towns of all other provinces.

The relatively high proportion of agricultural workers in urban areas could also be influenced by the nature of the Census. The 1998 Population Census was conducted on a de facto basis, i.e., persons were counted where they were on the census night of 2-3 March. Their labour force characteristics were recorded on the basis of usual activity, however, or their main economic activity over the previous 12 months. Thus, agricultural workers who were seasonal migrants to urban areas during the dry season were recorded in urban areas and their usual occupation was recorded as agriculture, although that may not have been their occupation while in the urban area. A closer examination of the location and occupation of migrants will be required to determine the extent to which seasonal migration may have contributed to the proportion of the urban labour force recorded as agricultural workers.

Eighty-four per cent of the rural labour force are agricultural workers. Agriculture is also the largest single occupation in urban areas, at 33 per cent of the urban labour force. Of course, the urban workforce comprises a greater variety of occupations, with 17 per cent of workers in services and sales, 13 per cent in elementary occupations and 11 per cent in crafts and related occupations (Table 2.11).

Although females as well as males work in a greater variety of occupations in urban than in rural areas, urban females mostly work in less-skilled occupations than their male counterparts. Among female workers in urban areas, 39 per cent are agricultural workers, 22 per cent are service and sales workers and 16 per cent are in elementary occupations (Table 2.11).

#### 2.4.2.2. *Occupation by Literacy and Educational Attainment*

[\(TOC\)](#)

Occupation is, to a large extent, determined by the education obtained. It may be seen from Table 3.6 that 47 per cent of professionals, 7 per cent of legislators, senior officials and managers, and 6 per cent of clerks are college or university graduates. Thirty-two per cent of technicians and associate professionals have obtained at least a secondary school diploma. In contrast, 39 per cent of agricultural workers are illiterate and less than 5 per cent of them have any education beyond primary school. Few skilled workers have obtained much education beyond the primary level. For example, only 16.5 per cent of craft and related workers and only 20.5 per cent of plant and machine operators and assemblers have progressed beyond primary school.

In general, women have lower levels of educational attainment than men, both overall and by specific occupation. The relatively small number of women who are legislators, senior officials and managers, and who are professionals are much more likely than their male counterparts to have graduated from a college or university, however (Table 2.12). This could imply that entry standards in those occupations are more stringent for women than men.

The urban workforce has considerably higher educational attainment than the rural, even in the same occupational group. For example, while 63 per cent of professionals in urban areas are graduates, in rural areas the corresponding percentage is only 27 (Table 2.12).

#### 2.4.2.3. *Occupation by Industry and Sex*

[\(TOC\)](#)

Table 2.13 shows that the percentage distribution of economically active population by both occupation and industry, and by sex. About 76 per cent work in agriculture, hunting and forestry and have their occupation in skilled agricultural and fishery (group 6). Next to agriculture, wholesale and retail trade and have their occupation in service workers and shop and market sales workers (group 5) absorbs about 4 per cent of economically active population followed by same industrial category and have their occupation in elementary occupations (group 9) (3 per cent).

Among economically active males, 70 per cent work in agriculture, hunting and forestry and have their occupation skilled agricultural and fishery (group 6) form the highest proportion. Next to agriculture, 4 per cent work in public administration and defense and have their occupation in armed forces (group 0) followed by wholesale and retail trade and have their occupation in service workers and shop and market sales workers (group 5), education and have their occupation in technicians and associate professionals (group 3), public administration and have their occupation in service workers and shop and market sales workers (group 5) which is about 2 per cent. Only about 1 per cent work in public administration and defense and have their occupation in clerks (group 4).

Among economically active females, although majority (82 per cent) work in agriculture, hunting and forestry and have their occupation in skilled agricultural and fishery (group 6) as men but other occupation and industry are different. Next to agriculture, 5 per cent work in wholesale and retail trade and have their occupation in service workers and shop and market sales workers (group 5), followed by the same industrial category and have their occupation in elementary occupations (group 9) 4 per cent, about 2 per cent female workers work in manufacturing and have their occupation in craft and related workers (group 7). Only about 1 per cent work in education industrial category and have their occupation in technicians and associate professionals (group 3).

It is natural that there is a close correspondence between occupation and industry, as may be seen in Table 2.13. For example, nearly all skilled agricultural and fishery workers are employed in the industries of agriculture, hunting and forestry, and fishing but men and women different as mentioned above.

### 2.4.3. *Employment Status*

[\(TOC\)](#)

The employment status of workers is presented in Table 2.14. The employment status reflects the low level of development of the economy, as only about 12 per cent of the workforce are paid employees and only 0.16 per cent are employers. The rest are divided approximately equally between own-account workers and unpaid family workers.

As would be expected, employment status differs between urban and rural areas. In urban areas, 35 per cent of the labour force are paid employees and only 20 per cent are unpaid family workers. In contrast, in rural areas only 9 per cent of workers are paid employees and 45 per cent are unpaid family workers.

**Table 2.14 Percentage Distribution of Employed Persons by Status in Employment, Sex and Residence.**

[List of Table](#)

Status in Employment	Total			Urban			Rural		
	Both sexes	Male	Female	Both sexes	Male	Female	Both sexes	Male	Female
Number	4,845,762	2,360,107	2,485,655	673,612	378,080	295,532	4,172,150	1,982,027	2,190,123
%	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00
Employer	0.16	0.21	0.10	0.41	0.50	0.28	0.11	0.15	0.08

Other	0.35	0.61	0.11	0.48	0.62	0.30	0.33	0.61	0.09

Source: Table B4

Note: Persons for whom status in employment was not reported are distributed proportionately .

Employment status also differs significantly by sex. Male workers (18 per cent) are three times as likely as female workers (6 per cent) to be paid employees and twice as likely to be own-account workers. Females are three times as likely as males to be unpaid family workers. Although 22 per cent of women workers in urban areas are paid employees, that proportion is much lower than the 45 per cent of men who are paid employees (Table 2.14). Women constitute 77 per cent of the unpaid family workers in the country, but they form only one third of employers and own-account workers and only one fourth of paid employees (Table 2.15).

**Table 2.15 Percentage Distribution of Females to Total Employed in Each Employment Status**

## **2.5. Economic Activity of Younger and Older Persons**

[\(TOC\)](#)

### *2.5.1. Economic Activity of Young Persons*

The number of young persons by economic activity is given in main table B.1, and the age-specific labour force participation rates by single year of age from 7 to 14 years are presented in Table 2.16. The number of child workers reported in the census is not especially high, but the population census may underestimate the actual amount of child labour because no labour force data were recorded as secondary occupation for persons whose main activity during the previous 12 months was "student". Thus main table B.1 records persons as employed or unemployed (i.e., economically active) only if that was their main activity.

With that limitation in mind, it may be seen that the economic activity rate of children ages 7 to 9 years is well below 1 per cent. The economic activity rate reaches 1 per cent for 10-year olds, 3 per cent for 12-year olds, 6 per cent for 13-year olds and 12 per cent for 14-year olds. Among all children aged 7-14 years, the labour force participation rate is only 3 per cent.

Girls enter the labour force somewhat sooner than boys, but the difference is not significant until about age 12. Girls aged 12-14 years and 15-19 years have much higher economic activity rates than boys.

**Table 2.16. Age-specific Labour Force Participation Rates (per cent) by Single Year of Age from 7 to 14 Years and Sex**

<i>Age</i>	<i>Both sexes</i>	<i>Male</i>	<i>Female</i>
Ages 7-14	2.96	2.38	3.57
7	0.32	0.32	0.31
8	0.45	0.43	0.47
9	0.61	0.60	0.62
10	1.26	1.24	1.28
11	1.70	1.59	1.82
12	3.02	2.65	3.43
13	5.92	4.81	7.10
14	11.73	8.56	14.80

[List of Table](#)

Source: Table B.1.

Approximately 90 per cent of boys and girls under age 15 years who are employed are unpaid family workers, as shown in Table 2.17. Only over age 15 do larger proportions of workers become employees or own-account workers.

**Table 2.17. Percentage of Employed Persons Aged 5-19 Years who are Unpaid Family Workers, by Five-year Age Group and Sex**

<i>Age group</i>	<i>Both sexes</i>	<i>Male</i>	<i>Female</i>
5-9	89.6	89.0	90.3
10-14	88.3	86.6	89.4
15-19	78.1	74.5	80.6

[List of Table](#)

Source: Table B.4.

Note: Persons for whom employment status was not reported are distributed proportionately.

Some young people who worked most of the previous 12 months were also attending school, but the proportion doing so was small. It may be seen from Table 2.18 that the proportion of young workers who were also attending school rises with age from 6 per cent among 7-year olds to 11 per cent among 11- and 12-year olds, then declines steadily to 5 per cent among 19-year olds. Working females between the ages of 7 and 20 are less likely than their male counterparts to be attending school, but the difference is not large.

**Table 2.18. Employed Persons Aged 7 to 20 who are Currently Attending School**[List of Table](#)

Age	Both sexes		Males		Females	
	Number of Employed Persons	Per cent Attending School	Number of Employed Persons	Per cent Attending School	Number of Employed Persons	Per cent Attending School
7	1,111	5.85	574	6.10	537	5.59
8	1,566	8.05	758	8.18	808	7.92
9	1,720	9.53	861	9.99	859	9.08
10	4,685	9.78	2,384	10.44	2,301	9.08
11	4,726	11.30	2,298	12.88	2,428	9.80
12	10,095	11.41	4,582	12.29	5,513	10.68
13	16,596	10.12	6,894	11.52	9,702	9.12
14	30,709	8.88	10,911	10.79	19,798	7.83
15	69,286	7.56	26,713	8.71	42,573	6.84
16	96,579	6.91	36,156	8.16	60,423	6.16
17	123,116	6.17	49,586	7.23	73,530	5.45
18	150,124	5.65	62,275	6.78	87,849	4.85
19	113,176	4.81	51,724	5.82	61,452	3.96
20	118,141	3.70	54,429	4.54	63,712	2.99

Source: Table B20

The general pattern of school attendance by age for children in the labour force is similar to that for all children, but at a much lower level. Among all children, 38 per cent of those 7 years old are currently attending school. That proportion rises with age to 77 per cent among 12-year olds, then declines to 21 per cent by age 19. Thus school attendance rates of children who are in the labour force are only one-seventh to one-fifth as high as for all children. This general finding is true for both boys and girls.

### 2.5.2. Economic Activity of Older Persons

[\(TOC\)](#)

High proportions of older persons remain economically active, no doubt owing to the agrarian nature of most of the workforce. Among all persons aged 60 years and over, 55 per cent are in the labour force. Seventy-one per cent of males and 44 per cent of females over age 60 remain economically active. Over 50 per cent of males remain economically active up to about age 75, while 50 per cent of females remain active nearly up to age 70 (Table 2.19).

**Table 2.19. Age-specific Labour Force Participation Rates for Ages 60 Years and over by Five-year Age Group and Sex**[List of Table](#)

Age Group	Both Sexes	Male	Female
Ages 60 and over	55.41	71.28	44.02
60-64	72.44	87.70	61.27
65-69	62.13	79.22	49.58
70-74	43.48	60.33	31.44
Ages 75 and over	27.27	39.95	18.70

Source: Table B.1.

## 2.6. Conclusion

[\(TOC\)](#)

An indication of the underdeveloped nature of the Cambodian economy is that only about a tenth of employed persons are paid, and half of the employed persons are own account workers and unpaid family workers. In other words, majority of employed persons are in the informal sector. The economic and social systems of Cambodia are underdeveloped, and within those systems the status of women remains substantially lower than that of men. Women are considerably disadvantaged within that economy. Male paid employees are twice as much as female paid employees. The percentage of unpaid family workers is much higher among women than men. A large majority of employed persons are agriculture and fishery workers. The second largest occupational group is elementary occupations with only six per cent of the labour force. Only a very small percentage of workers are skilled industrial workers. Females are in less skilled occupations than males. Most of them are in skilled agricultural and fishery occupation and small proportions are in elementary occupations and as sales personnel. Only fewer female workers are industrial workers and professional or technical personnel.
