FOREWORD

[TOC](#)

By HE Minister of Planning, Cambodia

The General Population Census of Cambodia 1998 conducted for the first time in 36 years has produced a variety of data. These include not only the population figures but also a plethora of information on the demographic, socio-economic and cultural aspects of the population. All these data require in-depth study, the results of which when disseminated, would prove useful to the line Ministries and other users, in planning for development of Cambodia. I am glad to note that with this end in view the UNFPA, the funding agency for the census, had thoughtfully included analysis and dissemination as an important post-census activity in the census project.

We express our deep sense of gratitude to HE Sar Kheng, Deputy Prime Minister and Co-Minister, Ministry of Interior who is the chairman of the National Census Committee and other members for their guidance from time to time. We thank HE Chea Chanto, former Minister of Planning and chairman of the Technical Committee for the census who co-ordinated and guided the census operations. We are thankful to HE Suy Sem former Acting Minister of Planning for the keen interest he took in post-census activities. Our thanks are also due to the members of Technical Committee for the Census and the National Steering Committee for Census Information and Education Campaign. The census operations were carried out mostly with the help of the Province Census Committees headed by Governors of Provinces. We thank the Governors and the members of the Provincial Census Committees for their assistance. The Press, the radio and the TV played a very important role in census publicity and our thanks are due to them.

We wish to place on record our gratitude to the United Nations Population Fund (UNFPA) and in particular its successive Representatives in Cambodia, Dr. Vincent Fauveau, Mr. Hedi Jemai and Ms Yoshiko Zenda for providing the necessary funding and technical assistance. We also thank the staff of UNFPA office Cambodia for their continued assistance. We are grateful to the United Nations Department for Economic and Social Affairs (DESA) for their co-operation in executing the project. We thank the UNDP for providing funds for census vehicles, computers and other equipment and the UNESCO for successfully implementing the advocacy and public information campaign for the census. We thank the advisers of UNFPA/CST and ESCAP who have assisted the national staff in analyzing the census results. Our thanks are due to Mr. Nott Rama Rao, Chief Technical Adviser, Mr. Harry Lode, Data Processing Adviser and other staff of the Census Project for their constant assistance and guidance.

The success of the census operations is mainly due to the teamwork in the census organisation itself. The Census of Cambodia is a massive administrative-cum-statistical exercise and its completion has been possible with the total help and co-operation received from one and all. The major share of the credit for the success of the census should go to the people of Cambodia themselves and to the large number of devoted, hard working and loyal enumerators, supervisors, village chiefs, commune, district and province census officers and their colleagues, Regional and Assistant Regional Officers and other staff of NIS and Ministry of Planning drafted for census as well as data processing work.

HE Lay Prohas, Secretary of State, Ministry of Planning has been ably co-ordinating the activity of the census project. HE Hou Taing Eng, former Director and HE San Sy Than, present Director, NIS, Mr. Seng Soeun, Deputy Director, NIS, and their colleagues have greatly assisted in the various census activities. Thanks are due to each of them.

I am sure this report on population projections based on the 1998 Census data would be welcomed by the various Ministries and Departments of the Royal Government of Cambodia as well as donors, international agencies, NGOs and other data users.

FOREWORD

By UNFPA Representative

[TOC](#)

The final census results were released in September 1999 when I had just arrived in Cambodia to take up my new responsibilities. Since then the staff of the NIS and Ministries concerned had undertaken further in-depth analysis of the census data. This was done in workshops conducted separately for each topic under the guidance of advisers from UNFPA CST and ESCAP. Earlier, UNFPA had funded the training of national staff by UNFPA/CST, at Bangkok on latest techniques of demographic analysis. I have been in close touch with the census office during the analysis stage and I am deeply impressed by the tenacity and commitment on the part of the staff in their efforts to accomplish this task well.

I am very glad to take this opportunity to record on behalf of UNFPA which has funded the census and on my own behalf, our congratulations to the Royal Government of Cambodia and the national staff concerned for their effort and interest in successfully conducting the census and publishing the results quickly through various analytical reports. This report containing population projections for Cambodia is a welcome addition to the series of census publications. I am thankful to UNFPA/CST for all the assistance provided in this regard. I am particularly grateful to the Advisers who worked closely with the international and national staff of the census project. I am sure the census analytical reports would go a long way in planning for development of Cambodia.

Rural	82

CHAPTER I

[TOC](#)

BACKGROUND OF THE 1998 POPULATION CENSUS

1.1 The 1998 Census

The General Population Census of Cambodia was conducted in March 1998. It revealed a population of 11.4 million. No census was conducted in Cambodia after 1962 due to war and political disturbances. According to the 1962 Census, the population of Cambodia was 5.7 million. Technical assistance and funding for the 1998 Census as well as for the preparatory activities from 1995 onwards, was provided by the UNFPA. The Geographical frame for the 1998 census followed the defined structure of province, district, commune and village. There are 24 provinces in the country, which include the municipality of Phnom Penh and the "Krong" or "Towns" of Preah Sihanouk, Kaeb and Pailin. These provinces are divided into 183 districts, which are subdivided into 1,609 communes containing 13,406 villages. Census enumeration covered the entire inhabited geographical areas with the exception of a few areas in the northwestern provinces bordering Thailand, which were inaccessible during the census due to military operations. The population in these excluded areas is estimated to be about 45,000. The refugee population, temporarily displaced to Thailand, was not included in the census as it was conducted on a *de facto* basis.

The 1998 Census was held under the authority of a Royal Decree on the organization of the General Population Census of Cambodia. According to this Decree, the Ministry of Planning is responsible for the General Population Census with the National Institute of Statistics (NIS) as the implementing agency. The Decree inter-alia ensures confidentiality of personal information collected in the census.

The National Committee for the General Population Census of Cambodia, under the chairmanship of HE Deputy Prime Minister and Co-Minister, Ministry of Interior, had the responsibility for instructing, deciding and endorsing all general items of work pertaining to the census. The Census Technical Committee with HE Minister of Planning as chairman dealt with technical issues relating to the census. In the conduct of the census, the population census office of the National Institute of Statistics (NIS) under the Director of Census was the central unit that served as the monitoring, communication and action center for the census.

1.2 Census Questionnaires

[TOC](#)

Two questionnaires were used in the 1998 Census of Cambodia (see Annexes 1 and 2). These were called: Form A: Houselist and Form B: Household Questionnaire. Form A: Houselist which was canvassed during the preliminary round was used to collect the following information in respect of buildings which had households in them: Building/Structure number, predominant construction material of wall, roof and floor of building, whether building is wholly or partly residential, household number, and name and sex of head of household and number of persons usually living in the household.

Form B: Household Questionnaire had four parts:- Parts 1, 2, 3, and 4. This was used for census enumeration during March 3 to 12, 1998 in all households. In Part 1, information

on usual members of household present on Census Night (March 3, 1998), visitors present on the Census Night and usual members absent on Census Night was collected.

Part 2 of Form B, was used to collect the following information in respect of each usual member of household present and each visitor to household: Full name, relationship to head of household, sex, age, marital status, mother tongue, religion, birth place, previous residence, duration of stay, reason for migration, literacy, full time education and economic characteristics.

In Part 3 of Form B, fertility information of females aged 15 and over in the household was collected. In Part 4 of Form B, following information was collected on housing conditions and facilities: basis of occupancy of the dwelling by the household (like owner occupied or rented), main source of light available to the household, main cooking fuel used by household, whether toilet facility was available within premises, main source of drinking water supply for the household and number of rooms occupied by the household.

1.3 Census Publicity [TOC](#)

For successfully conducting the census in a country, which did not have a census for a long time, people had to be informed well in advance about the scope and purposes of the census to get their co-operation. They had to be requested to co-operate by giving truthful information. The enumerators had to be requested to record correctly the information given by respondents. The public had to be convinced that the information collected in the census would be kept confidential. To achieve all these, a complementary project called "Advocacy and Public Information Campaign for the Population Census" (CMB/97/P08) was executed by UNESCO with UNFPA funding.

1.4 Census Enumeration

About 25,000 enumerators and 8,350 supervisors, drawn mostly from teachers were specially trained for carrying out the enumeration by visiting each and every household. The census was conducted on a *de facto* basis. The census was spread over a period of ten days from March 3 to 12, the census reference time being the midnight (00 hours) of March 3, 1998. It covered all persons staying in Cambodia at the reference time including foreigners. Foreign diplomatic corps and their families, were, however, excluded. Special arrangements were made to enumerate homeless population, those staying in hotels and guesthouses, transient population and those living in boats on the night of March 2, 1998. The census was preceded by the preliminary operation of houselisting during February 27 to March 2, 1998.

1.5 Data Processing [TOC](#)

The main post-census activity of the Data Processing Division was the manual coding and editing of census documents, data entry from the questionnaires, computer editing and tabulation and the generation of various dissemination products.

The manual coding and editing of the census documents was done in two stages. First, the summary statements were scrutinised and edited. This provided the basis for the provisional census results. The second stage concentrated on the coding, editing and data entry of the main census questionnaire (Form B).

Computer editing was performed to remove errors and inconsistencies in the data sets. A large number of statistical tables were generated at various geographical levels.

1.6 About this Report [TOC](#)

The present report contains the population projections and technical notes on the methodology and assumptions. It also contains a brief analysis of the projected figures. The projections have been made for five-year intervals during the years 2001 to 2021. The population of each year is with reference to 1 January of that year. The projections are based on the enumerated population as of 3 March 1998 with adjustments for under-enumeration. The projections have been done at national (including rural/urban), regional and provincial levels.

The assumptions and results were discussed thoroughly at in-country workshops conducted by advisers from UNFPA/CST and ESCAP. Trained national staff of NIS and Ministry of Health participated in the workshops. The international staff of the census project assisted in organizing the workshops and coordinating follow-up activities.

CHAPTER II

POPULATION PROJECTIONS, 2001-2021

2.1 Scope of Projections [TOC](#)

Population projections constitute an essential tool of development planning as they indicate the expected number of births, number of children of school age, the elderly population and population change resulting from fertility, mortality and migration.

In order to serve this planning functions, the current set of projections has the base date of 1 January 2001, the starting date of the second five-year development plan of the Royal Government of Cambodia. This set of projections extends for four five-year periods until 1 January 2021.

The projections were first prepared for the total population of Cambodia, then separately for the urban and rural populations. The urban and rural projections were controlled to the national population, that is, the urban and rural populations were forced to equal the previously projected national populations for each sex-age group at each future date.

Projections have also been prepared for the four geographical regions of Cambodia, the Plains, the Tonle Sap, the Coastal and the Plateau and Mountain regions. This was done partially because the projection computer program used, PEOPLE (Overseas Development Administration, 1992), can project a maximum of 15 sub-national areas simultaneously, whereas Cambodia has 24 provinces/municipalities. Thus, the population of the four geographical regions was first projected and controlled to the national projected population. The population of the provinces within each of the regions was then projected and controlled to the population of that region. Although projections for the regions were prepared as a methodological expedient, they are valuable in their own right.

It would have been possible to project each of the 24 provinces/municipalities separately, then to aggregate their populations to the regional and then the national level. It was believed, however, that estimates of total population, fertility and mortality were more valid for the national population than for all of the provinces, thus it was preferred to control the sub-national projections to the national projection.

Because the census date was 3 March 1998 but the projections are required to begin on 1 January 2001, projections for each area (national, urban, rural, regions and provinces) were first made for the five-year period from 3 March 1998 to 3 March 2003. The population by sex and age of each area as of 1 January 2001 was then determined by interpolation and used as the base population of the 20-year projection to 1 January 2021.

Only one projection variant has been prepared. It is expected that the final results of Cambodia's Demographic and Health Survey (DHS), 2000 will be available in early 2001 and it is recommended that the fertility and mortality estimates of the DHS be used to revise the projections at that time. Thus, alternative variants of the projections at this time would serve little purpose.

2.2. Base Population [TOC](#)

The population census of 3 March 1998 enumerated a total population of 11,437,656. This number is adjusted for four types of under-enumeration, as explained below.

1. The Post-Enumeration Survey (PES) conducted closely following the census, (National Institute of Statistics, 1999) estimated that the net undercount in the census was 1.78 per cent of the total population. Thus, the enumerated population was divided by 0.9822 to adjust it to its actual size. Although the PES calculated estimates of under-enumeration by sex and age group, only the overall adjustment of 1.78 per cent has been made for the sake of simplicity. This adjustment was applied equally to the urban and rural populations and to the population of each geographical region and each province.
2. In March 1998, the census was not able to enumerate the population of four small areas of the country owing to security reasons. These areas were (a) the district of Anlong Veaeng in Otdar Mean Chey Province, (b) the village of Ou Bei Choan in Banteay Mean Chey Province, (c) the district of Samlot in Bat Dambang Province, and (d) the district of Veal Veaeng in Pousat Province. Precise estimates of the population of these areas were not available, but it was estimated that their total population equaled 45,000 persons. It was assumed that this total should be allocated as follows: 10,000 to Otdar Mean Chey Province, 2,000 to Banteay Mean Chey Province, 23,000 to Bat Dambang Province, and 10,000 to Pousat Province.

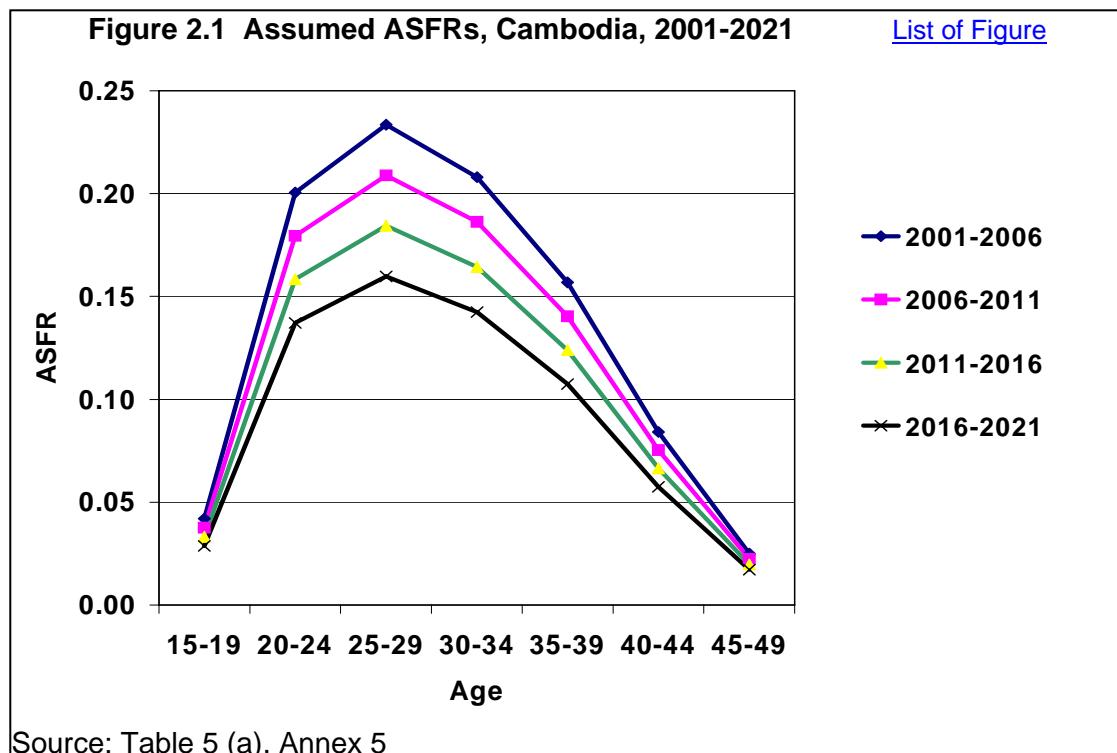

It may be noted that all four of these provinces are in the Tonle Sap region, so the entire 45,000 persons were allocated to that region. All of the four areas not enumerated are rural areas, so the total of 45,000 persons was also allocated only to the rural population for the purposes of the urban and rural projections. A step-down projection procedure was followed, whereby projections were carried out in sequence for the national population, for urban and rural areas, for regions and for provinces, with sub-national areas controlled to the projected population of the next higher level. Hence, when the total number of 45,000 was added to the census population, it was done according to the age and sex distribution of the national population, the rural population, the Tonle Sap region population, then the appropriate provincial populations.

3. At the time of the census in March 1998, there were 60,000 Cambodians temporarily displaced to camps in Thailand because of conflict near their villages. As all of them had returned to Cambodia within a few months, they must be included in the population of the country for projection purposes. It was assumed that 30,000 of these displaced persons returned to Banteay Mean Chey Province and 30,000 returned to Bat Dambang Province. Hence, the population of the Tonle Sap region, the rural population and the national population were each increased by 60,000 persons to incorporate these returnees. In each case, it was assumed that the returnees had the same age and sex structure as the population to which they were added. The age-sex distributions of the enumerated and adjusted population of 1998 are given in Annex 4.
4. As explained in the following section, the total fertility rate (TFR) in Cambodia had been estimated by indirect techniques to equal 5.3 children per woman in the year

prior to the census (1997-1998). Because of under-enumeration and age mis-statement, the population ages 0-4 as reported in the census is less than the actual number. In order to correct that age group, it was assumed that fertility had been constant for five years prior to the census, with a TFR of 5.30. From the estimated age-specific fertility rates consistent with that TFR and the female population reverse projected by single years, the number of births in each of the five years prior to the census was calculated. These were allocated by sex by assuming that the sex ratio at birth was 105 males per 100 females. Those numbers of births were then survived to the census date using the mortality level estimated in the mortality section below. These calculations implied that the number of males ages 0-4 years enumerated by the census should be increased by a factor of 1.2855 and the number of females ages 0-4 should be increased by a factor of 1.2935. These adjustment factors were applied to the census population (as adjusted for the three types of under-enumeration noted above) for the national, urban, rural, regional and provincial populations before making the preliminary projection from 1998 to 2003.

2.3. Fertility Estimates and Assumptions [TOC](#)

The 1998 population census obtained two types of information on fertility from all women age 15 and over. It first obtained the number of children ever born, the number still living and the number who had died, each by sex. It also asked the number of children born in the 12 months prior to the census. Both types of fertility information were tabulated by five-year age groups of women.

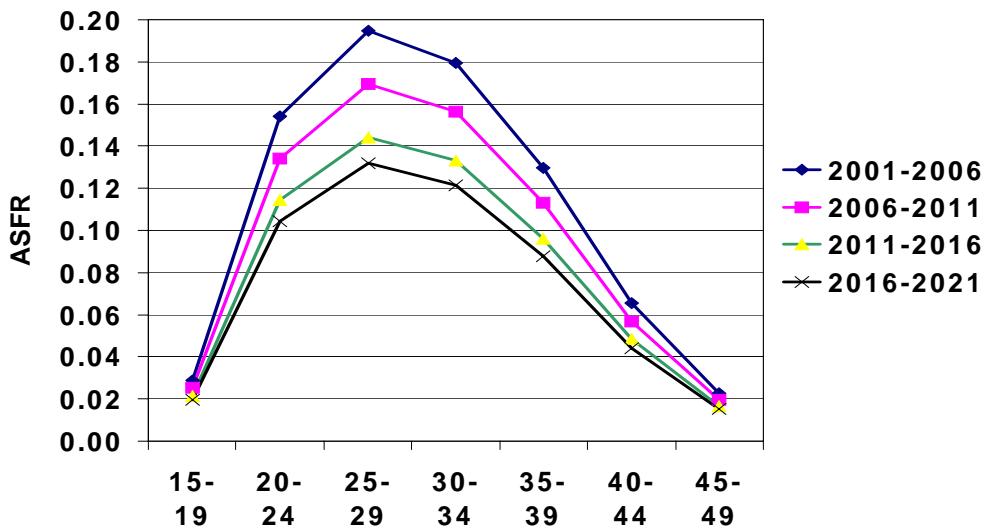

The direct question on children ever born in the previous 12 months was used to calculate age-specific fertility rates. These implied a total fertility rate (TFR) of 3.5 children per woman (National Institute of Statistics, 1999a). It is common in censuses and surveys for the number of births in the previous 12 months to be under-reported, and indirect techniques have been developed to adjust fertility rates obtained from this information to a

level which is consistent with the reported number of children ever born by age of woman. The Arriaga method of making this adjustment, as contained in the computer package MORTPAK developed by the United Nations Population Division, was used to estimate the actual level of fertility in Cambodia for the year prior to the census. That technique yielded an estimated TFR of 5.3 children per woman (National Institute of Statistics, 1999a).

Figure 2.2 Assumed ASFRs, Urban Cambodia, 2001-2021

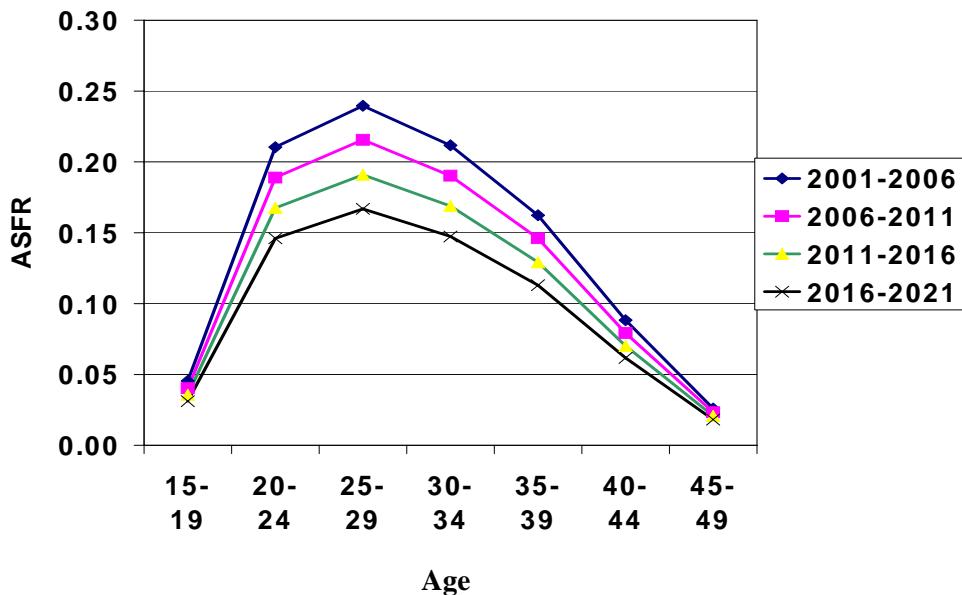

[List of Figure](#)

Source: Table 5(a), Annex 5

Figure 2.3 Assumed ASFRs, Rural Cambodia, 2001-2021

[List of Figure](#)

Source: Table 5(a), Annex 5

The projections assume that a decline in the TFR has begun after 1998 owing to the expanded number and scope of birth-spacing and other reproductive health programmes. For projection purposes, it is assumed that the decline in TFR is currently 0.4 children in a five-year period. After 2006 that decline is assumed to accelerate slightly to 0.5 children in a five-year period.

As the TFR for the country was estimated to equal 5.3 during the 12 months prior to the census, it is assumed to equal 5.0 for the preliminary projection period of 1998-2003 and 4.75 for the period 2001-2006. The same absolute declines were assumed for urban and rural areas, the four geographical regions and the 24 provinces/municipalities. After the TFR declines to about 3.0, it is assumed that it will decline by only 0.25 children in each five-year projection period. The estimated and assumed TFRs for the whole country and urban and rural areas are shown in Table 2.1.

Table 2.1. Estimated and Assumed Total Fertility Rates (TFR) for Cambodia, Total, Urban and Rural Areas, 1997-1998 to 2016-2021 [List of Table](#)

Period	Cambodia	Urban	Rural
Census (1997-1998)	5.30	4.42	5.47
1998-2003	5.00	4.12	5.17
2001-2006	4.75	3.87	4.92
2006-2011	4.25	3.37	4.42
2011-2016	3.75	2.87	3.92
2016-2021	3.25	2.62	3.42

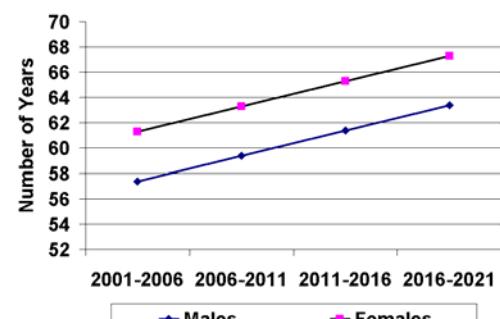

Source: Table 5(a), Annex 5

The estimated and assumed TFRs and ASFRs for the provinces are shown in Table 5(a) (Annex 5). It is assumed that the pattern of age-specific fertility rates will not change as fertility declines. This is a simplifying assumption, but it may be noted that Cambodia already has a late childbearing pattern, with the fertility rates for women ages 25-29 and 30-34 exceeding that of women ages 20-24. The total and age-specific fertility rates for the four geographical regions were not directly measured but were calculated as weighted averages of those rates for the provinces in each region, weighted by the number of women aged 15-49 years.

2.4. Mortality Estimates and Assumptions [TOC](#)

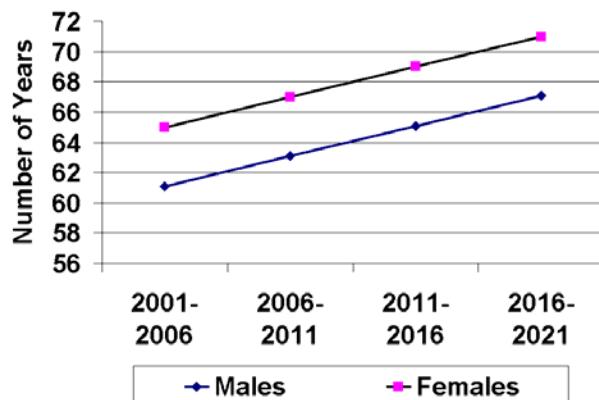

The questions in the 1998 Census addressed to all women age 15 and over on the number of children ever born, by sex, the number surviving and the number who had died may be used to estimate the level of infant and child mortality, through indirect estimation techniques. The data from the census indicated an infant mortality rate of 80 per 1,000 live births, with a reference period of February 1996. The male infant mortality rate was 88 and the female

Figure 2.4 Assumed Life Expectancy at Birth, Cambodia, 2001-2021 [List of Figure](#)

Rural, Cambodia, 2001-2021** [List of Figure](#)

Source: Table 5(b), Annex 5

rate was 72 (National Institute of Statistics, 1999a).

The census did not ask any question on adult mortality. For the purposes of population projections, life tables were generated using the estimated infant mortality rate and Coale-Demeny north model life tables.

It should be borne in mind that these life tables are constructed from models rather than from any direct information on adult mortality. The resultant life tables indicated that the expectation of life at birth for males was 54.4 years and for females 58.3 years in the year 1996. Separate estimates were made by sex for the national population, urban and rural areas, and the 24 provinces/municipalities. Estimates of expectation of life at birth for the four geographical regions were calculated as weighted averages for the male and female populations of the provinces within each region.

For the projections, it was assumed that the expectation of life at birth would increase by two years during each five-year projection period. This is a modest pace of increase. It has been estimated

that the prevalence of the human immuno-deficiency virus (HIV) in the adult population is 3.8 per cent. If that is the case, the increases in expectation of life at birth assumed in the projections are too optimistic. Alternative projections incorporating the impact of HIV/AIDS on mortality would be valuable. The next revision of these projections may need to accept a slower pace of increases in expectation of life at birth.

**Table 2. 2 Estimated and Assumed Expectation of Life at Birth for Cambodia
Total, Urban and Rural Areas, 1996 to 2016-2021**

[List of Table](#)

Period	Cambodia		Urban		Rural	
	Male	Female	Male	Female	Male	Female
1996	54.4	58.3	58.1	62.0	53.9	57.8
1998-2003	56.4	60.3	60.1	64.0	55.9	59.8
2001-2006	57.4	61.3	61.1	65.0	56.9	60.8
2006-2011	59.4	63.3	63.1	67.0	58.9	62.8
2011-2016	61.4	65.3	65.1	69.0	60.9	64.8
2016-2021	63.4	67.3	67.1	71.0	62.9	66.8

Source: Table 5(b), Annex 5

The estimated and assumed expectation of life at birth by sex for the national population and urban and rural areas are shown in Table 2.2. Table 5(b) (Annex5) presents the estimated and assumed expectation of life at birth by sex for the regions and the provinces/municipalities.

2.5. Migration Estimates and Assumptions [TOC](#)

In the five years prior to the census, the number of inter-provincial migrants equaled 492,000 according to Census Priority Table C4 (Annex 3). That total, distributed by sex and province, is presented in Table 5 (c) (Annex 5). The net number of migrants for each province, by sex, during 1993-1998 is also shown in Table 5 (c).

For the projections, it was assumed that the high levels of in-migration to Banteay Mean Chey, Kaoh Kong, Pailin and Phnom Penh would be somewhat reduced. As net internal migration should equal zero, it was also assumed that the high levels of out-migration from Kampong Cham, Kampot, Prey Veaeng, Svay Rieng and Takaev would also be somewhat lower. For the remaining 15 provinces, the level of net migrants was assumed to be the same as reported. The assumed levels of net migration at province level were expected to remain constant throughout the projection period.

2.6. Summary of Projection Methodology

The population of Cambodia was counted as 11,437,656 on 3 March 1998. As discussed earlier, the census could not be conducted in four small areas whose population was estimated to be 45,000. Taking into account this population, the net under-count of 1.78 per cent of the total population as revealed by PES and the 60,000 displaced persons mainly living in Thailand, the total population of Cambodia was adjusted to be 12,186,047 on 3 March 1998. The 1998 adjusted population was projected to 2003 using PEOPLE software. With the adjusted 1998 population and the estimated population of 2003, the population as on 1 January 2001 was interpolated. The population thus estimated for 1 January 2001 was 13,099,972. This was adopted as the base population of the 20-year projections to 1 January 2021 using PEOPLE.

The PEOPLE software calculates several parameters related to population projection such as growth rate, dependency ratio, CDR and CBR etc. based on our inputs and assumptions. The option of exponential change was used to generate the projected figures and hence the growth rate refers to exponential growth rate for each five-year period.

2.7 Brief Analysis of Results [TOC](#)

The projection results are contained in Tables 2.3 to 2.10*. Table 2.3 gives the projected annual growth rate, CBR and CDR. Table 2.4 presents the projected sex ratio, dependency ratio and median age. The projected population figures for the years 2001-2021 are given in Table 2.5. The age-sex distributions of the projected populations are given in Tables 2.6 to 2.10 at national (separately for urban and rural areas), regional and provincial levels.

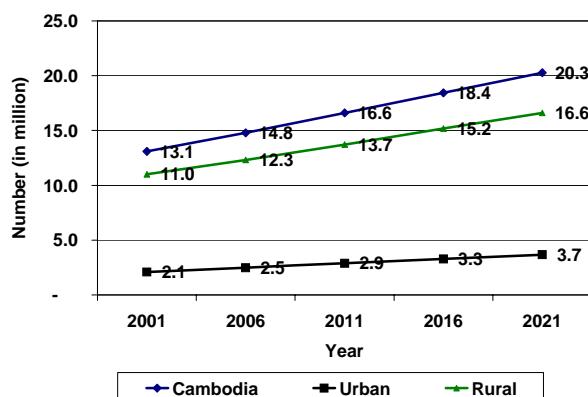

* These tables are given at the end of this chapter.

2.7.1 Population Growth Rate

[TOC](#)

The population of Cambodia is likely to increase from about 12.2 million in 1998 (adjusted) to 20.3 million in 2021. The percentage of urban population may increase from about 16 per cent to 18 per cent during the period, 2001-2021.

Figure 2.7 Projected Populations of Cambodia by Residence, 2001-2021 [List of Figure](#)

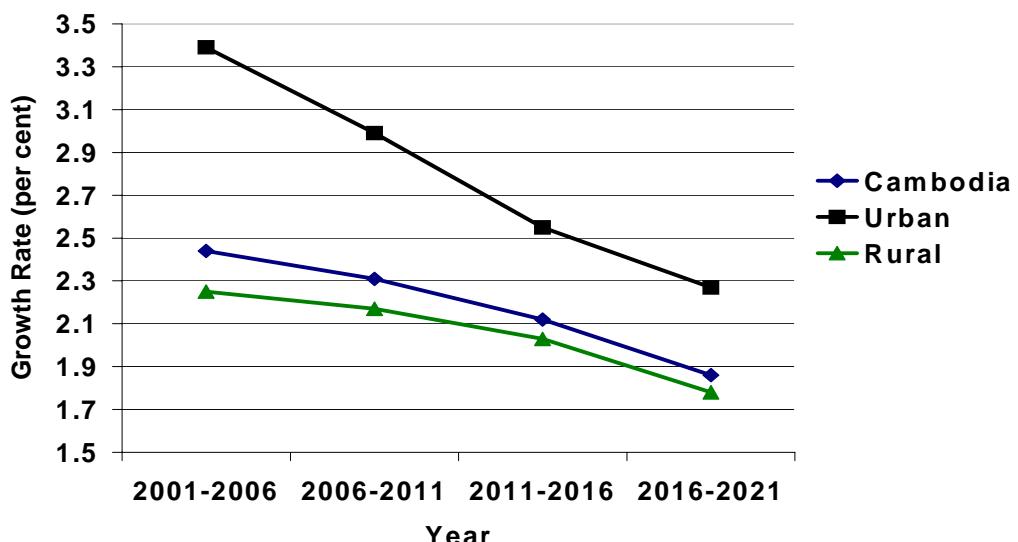

Source: Table 2.5

Table 2.3 reveals that five-year growth rates are moderately declining for the country as a whole from 2.4 percent during 2001-2006 to 1.9 per cent in 2016-2021, a decline by 0.5 percentage point. The urban growth rate, however, declines steeper, from 3.4 per cent to 2.3 per cent, a decline of more than one percentage points.

Among the regions, the Coastal region shows the highest growth rate during 2001-2006 but the Plateau and Mountain region takes the lead during 2016-2021. The lowest decline in the 20-year period is recorded by the Tonle Sap region (0.42 percentage point) and the highest by the Plains region (0.71 percentage point).

During 2001-2006, Krong Pailin and Kaoh Kong provinces recorded the highest population growth rate (4.9 per cent) and Prey Veaeng province the lowest growth rate (1.5 per cent). During 2016-2021, the highest and the lowest growth rates are expected to be in Krong Kaeb (3.5 per cent) and Prey Veaeng (0.95 per cent) provinces respectively.

Source: Table 2.3

Fig 2.9 Projected CBRs and CDRs, Cambodia, 2001-2021

[List of Figure](#)

Source: Table 2.3

2.7.2 Crude Birth Rate (CBR) and Crude Death Rate (CDR)

[TOC](#)

During the 20 year period, 2001-2021, Cambodia is likely to witness a decline of 8.3 percentage points in the CBR and a decline of 2.5 percentage points in the CDR (Table 2.3).

There are differentials in CBR and CDR between urban and rural areas. Due to better health and education facilities and easier access to family planning services, CBR and CDR are at lower levels in the urban areas than in the rural areas.

Figure 2.10 Projected CBRs and CDRs, Urban, Cambodia, 2001-2021

[List of Figure](#)

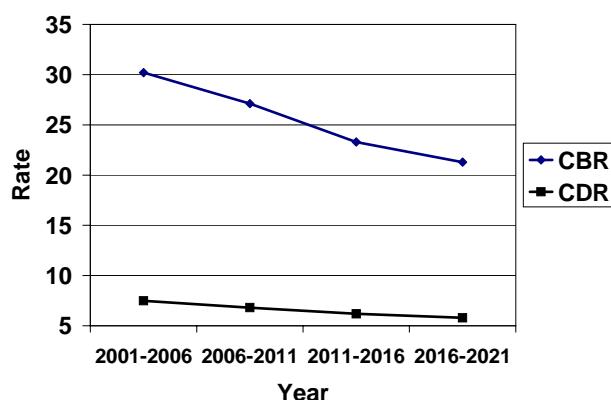

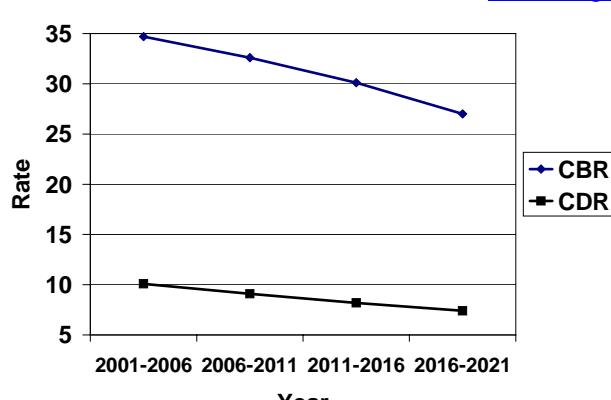

Figure 2.11 Projected CBRs and CDRs, Rural, Cambodia, 2001-2021

[List of Figure](#)

Source: Table 2.3

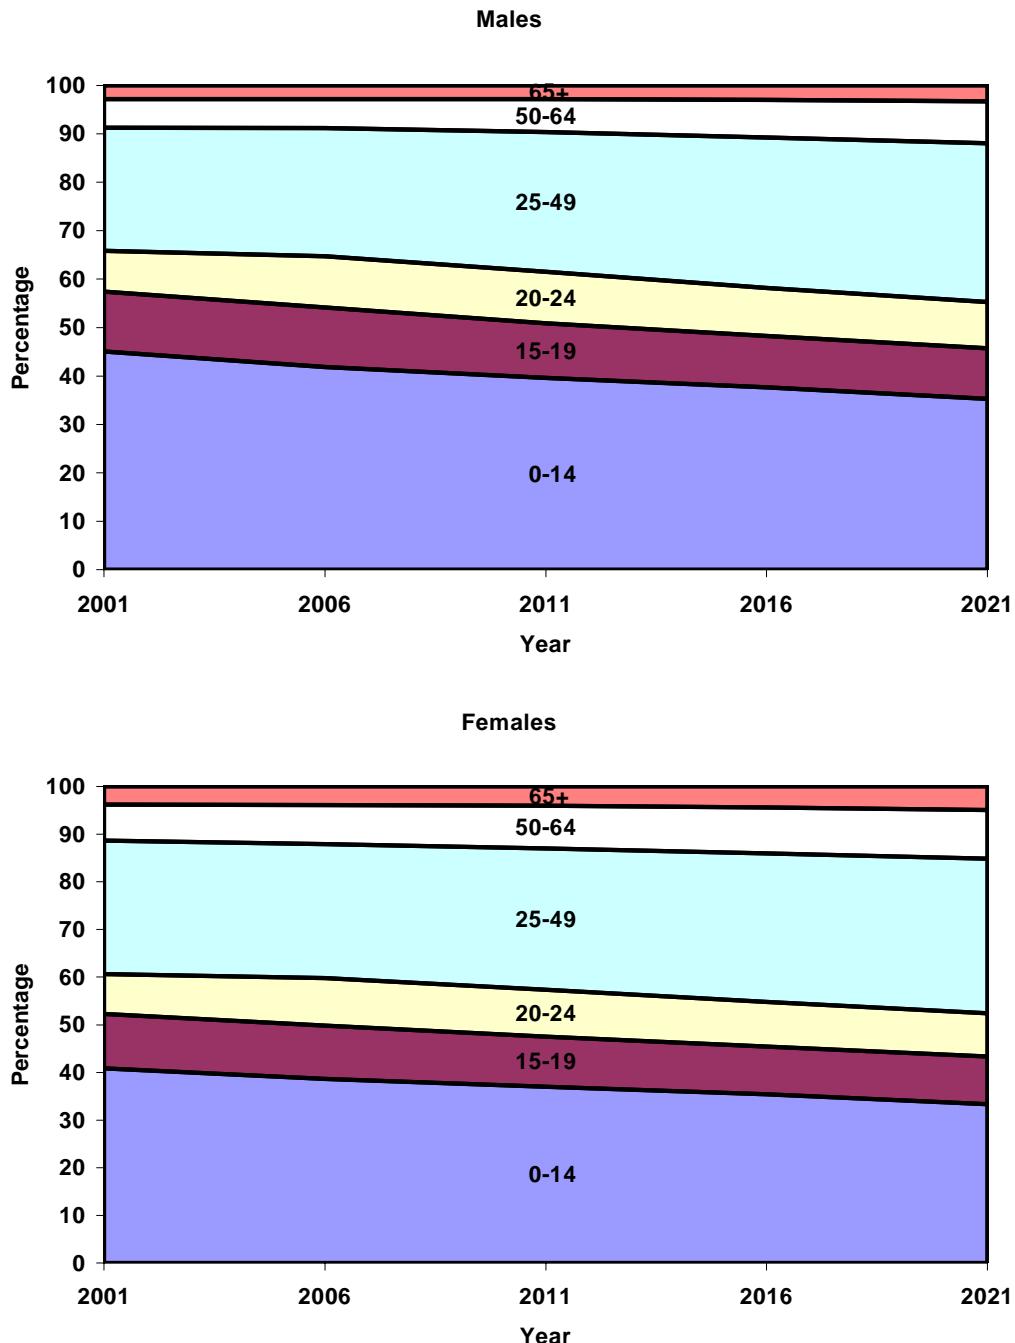

Pousat (4 percentage points) province and the lowest decline in CDR may be recorded by Phnom Penh province (1.1 percentage points).

2.7.3 Dependency Ratio, Sex Ratio and Median Age of the Projected Population

Table 2.4 gives the dependency ratio, sex ratio and median age of the projected population. The sex ratio shows an increasing trend in general. Among the regions, the sex ratio of Coastal region may cross the hundredth mark in 2016 and in the Plateau and Mountain region, this may happen in 2021.

Figure 2.12 Cumulative Percentage Distribution of Projected Population of Cambodia by Broad Age Group and Sex

[List of Figure](#)

Source: Table 2.6

It is observed that in 2001 the sex ratio is the highest in Krong Pailin (117.5) among the provinces. The following provinces may continue to have a sex ratio of more than 100 through most part of the projection period: Kaoh Kong, Kracheh, Mondol Kiri, Preah Vihear, Otdar Mean Chey, Krong Preah Sihanouk, Krong Kaeb and Krong Pailin. Bat Dambang may be the only province having an excess of males over females for the first time in the year 2021. In the remaining provinces, the sex ratio will continue to be less than 100 throughout the projection period.

In the provinces, regions and the country as a whole, the age dependency ratio is likely to decrease in 2021 compared to 2001. In 2001, among the provinces, the highest dependency ratio is observed in Preah Vihear and Rotanak Kiri (99.1) and the lowest in Phnom Penh (57.4). In 2021, the highest and the lowest dependency ratio will continue to be in Rotanak Kiri (84.3) and Phnom Penh (51.0) provinces respectively.

Judging from the median age of Cambodia as a whole (Table 2.4) at each of the years of projection, it could be said that Cambodia, with a “young population” (under 20) in 2001 and 2006 would be moving towards having a population with “intermediate” age (20-29). This may perhaps mark the setting in of the “aging” process. However, there are differentials at provincial level in this regard.

2.8 Conclusions [TOC](#)

The growth rate of population is expected to decline with an increase in absolute figures every year; the urban areas showing higher growth rates compared to the rural. The proportion of children may be slightly decreasing and the proportion of adult population increasing.

These projections are based on an assumption that the effects of HIV/AIDS will not be significant during 2001 to 2021. It is therefore recommended that if the DHS-2000 results do not validate this assumption or the other set of assumptions (mortality, fertility and migration), then a new set of projections needs to be made.

Age Dependency Ratio

Percentage of the population in the younger (0-14) and older (65 +) to the population in the age group 15-64.

Annul Exponential Growth Rate

$$r = \frac{\log_e P_t - \log_e P_0}{t}$$

where, P_0 is the population at the base year, P_t is the population at the year 't' and 't' is the number of years between P_0 and P_t . Here the compounding with the rate of growth 'r' is done on a continuous basis.

Age-Specific Fertility Rate (ASFR)

The number of births occurring during a 12 month period to women of a specified age group per woman in that age group.

Crude Birth Rate (CBR)

The number of live births in a year per 1,000 population.

Crude Death Rate (CDR)

The number of deaths in a year per 1,000 population.

Expectation of life at birth or Life expectancy at birth

It is the average number of years that a member of a "cohort" of births would be expected to live if the cohort were subject to the mortality conditions expressed by a particular set of "age specific mortality rates".

Median Age

The age, which divides the population into two equal size groups, one of which is younger and the other is older than the median. It corresponds to the 50-percentile mark in the distribution.

Migrants

A migrant is defined as a person who had moved to the place (village) of enumeration from another previous place (village) of residence. Lifetime migrant refers to a person born outside his/her place of enumeration. Recent migrant refers to a person who had moved to the place of enumeration from another previous residence within the 5 years preceding the census date (March 3, 1998).

Natural Regions

The Natural Regions and the provinces falling in each of them are given below:

Plains: Phnom Penh, Kandal, Kampong Cham, Svay Rieng, Prey Veaeng and Takaev,

Tonle Sap: Kampong Thum, Siem Reab, Bat Dambang, Pousat, Kampong Chhnang, Banteay Mean Chey, Otdar Mean Chey and Krong Pailin.

Coastal: Krong Preah Sihanouk, Kampot, Krong Kaeb and Kaoh Kong.

Plateau and Mountain: Kampong Spueu, Stueng Traeng, Rotanak Kiri, Mondol Kiri, Kracheh and Preah Vihear.

Place of Enumeration

It is the place (village) where the person slept on the night preceding the census day and enumerated.

Sex Ratio

Number of males per 100 females in a population.

Total Fertility Rate

The number of children that a woman would have in her lifetime if she followed a given set of age-specific fertility rates. The TFR is calculated by adding up the ASFRs for 5-year age groups and multiplying the sum by 5.

Urban and Rural

In all provinces, districts containing provincial headquarter towns are treated as urban areas. Krong Preah Sihanouk, Krong Kaeb and Krong Pailin are treated as entirely urban. In Phnom Penh municipality, the four districts or khans of Doun Penh, Chamkar Mon, Prampir Meakkakra and Tuol Kouk are classified as urban. All the remaining areas in the country are treated as rural.

Codes for Column 3
Relationship to Head of Household

- 1: Head
- 2: Wife / Husband
- 3: Son / Daughter
- 4: Father / Mother
- 5: Grand Child
- 6: Other Relative
- 7: Non-relative

Codes for Column 11
Duration of Stay

- 00: Less than 1 year
- 01: 1 to less than 2 years
- 02: 2 to less than 3 years
- .
- 10: 10 to less than 11 years
- .
- 20: 20 to less than 21 years
- .
- 97: 97 to less than 98 years
- 98: 98 years and over

Codes for Column 12
Reason for Migration

- 1: Transfer of work place
- 2: In search of employment
- 3: Education
- 4: Marriage
- 5: Family moved
- 6: Natural calamities or insecurity
- 7: Repatriation or Return after displacement
- 8: Visiting only
- 9: Other (specify)

FOR ALL PERSONS

Codes for Column 14 (b)
What is the highest grade completed?

For Never in 14 (a) put dash (-)
For Now or Past in 14 (a), Code as follows:-

- 00: No class completed
- 01: Class 1 completed
- 02: Class 2 completed
- .
- .
- 11: Class 11 completed
- 12: Class 12 completed
- 13: Secondary School / Certificate / Diploma
- 14: Undergraduate
- 15: Graduate / Degree holder
- 16: Postgraduate
- 17: Other (specify)

Codes for Column 15

Main Activity During Last Year

1: Employed (Fill in Cols. 16 to 20)
2: Unemployed (Employed any time before)
(Fill in Cols. 16 to 20 for last employment)
3: Unemployed (Never employed any time before)
Inactive
4: Home maker
5: Student
6: Dependent
7: Rent-receiver, Retired or other income recipient
8: Other (Specify)
(For codes 3 to 8, put dash (-) in Cols. 16 to 20)

**Codes for Column 18
Employment Status**

- 1: Employer
- 2: Paid employee
- 3: Own - account worker
- 4: Unpaid family worker
- 5: Other (specify)

Codes for Column 20 Sector of Employment

- 1: Government
- 2: State-owned enterprise (Parastatal)
- 3: Cooperative
- 4: Private
- 5: Other (specify) _____

FORM B: HOUSEHOLD QUESTIONNAIRE PART 3: FERTILITY INFORMATION OF FEMALES AGED 15 AND OVER LISTED IN COLUMN 2 OF PART 2

Sl. No.	Full Name	Sl No. in Col. 1 of Part 2	Fertility Information							
			4						5	
		Number of Children Born (Give number in two digits like 01, 02,.....10, 11 etc. If none, write 00)						Particulars of Birth in the last 12 months		
		How many children have been born alive to the woman ?		How many of them are living?		How many of them have died?		Any child born alive to the woman during the last 12 months? (Give actual number like 1,2,... If none, write 0)		
		(a) Male	(b) Female	(c) Male	(d) Female	(e) Male	(f) Female	Male	Female

General Population Census of Cambodia, 1998

[\(Annex 4\)](#)

Publication Programme

The following reports are proposed to be published as and when ready during 1999-2000:

1. Provisional Population Totals¹
2. Final Census Results¹
3. Report of the Post-Enumeration Survey¹
4. The 1998 Census Tables for Cambodia and each of the 24 provinces
(25 volumes)¹
5. Village Gazetteer¹
6. Organization and Administration of the General Population Census of Cambodia, 1998¹
7. Census Analytical Reports:
 - (i) Fertility and Mortality¹
 - (ii) Nuptiality¹
 - (iii) Labour Force and Employment¹
 - (iv) Housing and Household Characteristics¹
 - (v) Spatial Distribution and Migratory Movement of Population²
 - (vi) Population Projections
 - (vii) Literacy and Education
 - (viii) Women in Cambodia

8. Census Thematic Atlas

CD-ROMs released so far

CD#1 containing 47 priority statistical tables at country (total, urban and rural), province (total, urban and rural) and district levels with a total of 10,984 tables.

CD#2 containing data for more than 13,000 villages on age, sex, relationship marital status, literacy, school attendance, educational attainment and housing amenities. The product is in the format of DBF databases easily convertible into Access or Excel files.

The publications and CD-ROMs can be purchased from the Census Office of National Institute of Statistics at No. 27, Street 392, Boeng Keng II, Phnom Penh (Tel. 023 364658) or National Institute of Statistics in the Ministry of Planning compound (Tel. 016 832762).
