## FOREWORD

### By HE Minister of Planning

The General Population Census of Cambodia 1998 conducted for the first time in 36 years has produced a variety of data. These include not only the population figures but also a plethora of information on the demographic, socio-economic and cultural aspects of the population. All these data require in-depth study, the results of which when disseminated, would prove useful to the line Ministries and other users, in planning for development of Cambodia. I am glad to note that with this end in view the UNFPA, the funding agency for the census, had thoughtfully included analysis and dissemination as an important post-census activity in the census project.

We express our deep sense of gratitude to HE Sar Kheng, Deputy Prime Minister and Co-Minister, Ministry of Interior who is the chairman of the National Census Committee and other members for their guidance from time to time. We thank HE Chea Chanto, former Minister of Planning and chairman of the Technical Committee for the census who co-ordinated and guided the census operations. We are thankful to HE Suy Sem former Acting Minister of Planning for the keen interest he took in post-census activities. Our thanks are also due to the members of Technical Committee for the Census and the National Steering Committee for Census Information and Education Campaign. The census operations were carried out mostly with the help of the Province Census Committees headed by Governors of Provinces. We thank the Governors and the members of the Provincial Census Committees for their assistance. The Press, the radio and the TV played a very important role in census publicity and our thanks are due to them.

We wish to place on record our gratitude to the United Nations Population Fund (UNFPA) and in particular its successive Representatives in Cambodia, Dr. Vincent Fauveau, Mr. Hedi Jemai and Ms Yoshiko Zenda for providing the necessary funding and technical assistance. We also thank the staff of UNFPA office Cambodia for their continued assistance. We are grateful to the United Nations Department for Economic and Social Affairs (DESA) for their co-operation in executing the project. We thank the UNDP for providing funds for census vehicles, computers and other equipment and the UNESCO for successfully implementing the advocacy and public information campaign for the census. We thank the advisers of UNFPA/CST and ESCAP who have assisted the national staff in analyzing the census results. Our thanks are due to Mr. Nott Rama Rao, Chief Technical Adviser, Mr. Harry Lode, Data Processing Adviser and other staff of the Census Project for their constant assistance and guidance.

The success of the census operations is mainly due to the teamwork in the census organisation itself. The Census of Cambodia is a massive administrative-cum-statistical exercise and its completion has been possible with the total help and co-operation received from one and all. The major share of the credit for the success of the census should go to the people of Cambodia themselves and to the large number of devoted, hard working and loyal enumerators, supervisors, village chiefs, commune, district and province census officers and their colleagues, Regional and Assistant Regional

Officers and other staff of NIS and Ministry of Planning drafted for census as well as data processing work.

HE Lay Prohas, Secretary of State, Ministry of Planning has been ably co-ordinating the activity of the census project. HE Hou Taing Eng, former Director and HE San Sy Than, present Director, NIS, Mr. Seng Soeun, Deputy Director, NIS, and their colleagues have greatly assisted in the various census activities. Thanks are due to each of them.

I am sure this report would be welcomed by the various Ministries and Departments of the Royal Government of Cambodia as well as donors, international agencies, NGOs and other data users.

Ministry of Planning  
Phnom Penh

Chhay Than  
Minister of Planning

## **FOREWORD**

### **By UNFPA Representative**

The final census results were released in September 1999 when I had just arrived in Cambodia to take up my new responsibilities. Since then the staff of the NIS and Ministries concerned had undertaken further in-depth analysis of the census data. This was done in workshops conducted separately for each topic under the guidance of advisers from UNFPA CST and ESCAP. Earlier, UNFPA had funded the training of national staff by UNFPA/CST, at Bangkok on latest techniques of demographic analysis. I have been in close touch with the census office during the analysis stage and I am deeply impressed by the tenacity and commitment on the part of the staff in their efforts to accomplish this task well.

I am very glad to take this opportunity to record on behalf of UNFPA which has funded the census and on my own behalf, our congratulations to the Royal Government of Cambodia and the national staff concerned for their effort and interest in successfully conducting the census and publishing the results quickly through various analytical reports. I am thankful to UNFPA/CST for all the assistance provided in this regard. I am particularly grateful to the Advisers who worked closely with the international and national staff of the census project. I am sure the census analytical reports would go a long way in planning for development of Cambodia.

1.	Number of provinces / municipalities			24
2.	Number of districts			183
3.	Number of communes			1,609
4.	Number of villages			13,406
5.	Population by Urban-Rural residence and sex			
	<b>Residence</b>	<b>Both sexes</b>	<b>Males</b>	<b>Females</b>
	Cambodia	11,437,656	5,511,408	5,926,248
	Urban	1,795,575	878,186	917,389
	Rural	9,642,081	4,633,222	5,008,859
6.	Percentage of urban population			15.7
7.	Annual population growth rate (percent)			2.49
8.	Total number of households			2,188,663
9.	Number of normal or regular households			2,162,086
10.	Average household size (based on normal or regular households)			
		Cambodia		5.2
		Urban		5.5
		Rural		5.1
11.	Percentage of female headed households			25.7
12.	Density of population per Km <sup>2</sup>			64
13.	Percentage of population by age group			
		Children (0-14)		42.8
		Economically productive age group (15-64)		53.7
		The elderly population (65+)		3.5
14.	Dependency ratio			
		Cambodia		86.1
		Urban		69.1
		Rural		89.7
15.	Sex ratio (No. of males per 100 females)			
		Cambodia		93.0
		Urban		95.7
		Rural		92.5

16. Marital status of population aged 15 and over

Sex	Marital Status (in percentage)				
	Never Married	Married	Widowed	Divorced	Separated
Both Sexes	29.4	61.3	6.5	2.4	0.4
Males	32.8	64.6	1.6	0.8	0.2
Females	26.6	58.4	10.8	3.7	0.5

17. Singulate Mean age at marriage

Males	24.2
Females	22.5

18. Adult literacy rate (percentage of literate persons aged 15 and over to total persons aged 15 and over)

Residence	Both Sexes	Males	Females
Cambodia	67.3	79.5	57.0
Urban	79.1	88.2	70.8
Rural	64.9	77.6	54.3

19. Educational levels completed by literate persons aged 25 years and over

Educational Level	Percentage		
	Both Sexes	Males	Females
No educational Level	2.1	2.0	2.2
Primary not completed	56.6	49.0	66.1
Primary	24.7	28.7	19.7
Lower Secondary	11.8	13.9	9.2
Secondary/Diploma	4.0	5.3	2.4
Beyond and Secondary	0.8	1.1	0.4

20. Economic activity rate of population aged 15 years and over

Both Sexes	77.0
Males	81.2
Females	73.5

21. Percentage of population by industrial sector

Primary	77.5
Secondary	4.3
Tertiary	18.2

22. Percentage of migrants (with previous residence outside place of enumeration)

31.5

23. Quality of Residential Buildings

**Percentage of buildings by nature of construction**

	<b>Permanent</b>	<b>Semi-permanent</b>	<b>Temporary</b>
<b>Cambodia</b>	34.2	21.3	44.5
Urban	60.5	15.6	23.9
Rural	30.4	22.2	47.9

24. Tenure status of dwellings of households

**Percentage of households**

	<b>Owner Occupied</b>	<b>Rented</b>	<b>Rent-free</b>	<b>Other</b>
Cambodia	95.3	1.6	2.5	0.6
Urban	88.4	6.9	3.9	0.8
Rural	96.5	0.7	2.3	0.5

25. Percentage of households having access to safe drinking water (i.e. piped water, water from tube/pipe well and water bought)

Cambodia	29.0
Urban	60.3
Rural	23.7

26. Percentage of households having electricity as main source of light

Cambodia	15.1
Urban	53.6
Rural	8.6

27. Percentage of households by main type of fuel used for cooking

Firewood	90.0
Charcoal	5.3
Kerosene	1.8
LPG	1.7
Others	1.2

28. Percentage of households having toilet facility within premises

Cambodia	14.5
Urban	49.0
Rural	8.6

29. Estimates of Total Fertility Rate		
	Cambodia	5.3
	Urban	4.4
	Rural	5.5
30. Estimates of Infant Mortality Rate		
	Both Sexes	80
	Males	88
	Females	72
	Urban	65
	Rural	82
31. Estimates of Life Expectancy at Birth		
	Both Sexes	56.3
	Males	54.4
	Females	58.3
	Urban	60.0
	Rural	55.8

# CHAPTER I

## BACKGROUND OF THE 1998 POPULATION CENSUS

### 1.1 The 1998 Census

[TOC](#)

The General Population Census of Cambodia was conducted in March 1998. It revealed a population of 11.4 million. No census was conducted in Cambodia after 1962 due to war and political disturbances. According to the 1962 Census, the population of Cambodia was 5.7 million. Technical assistance and funding for the 1998 Census as well as for the preparatory activities from 1995 onwards, was provided by the UNFPA. The Geographical frame for the 1998 census followed the defined structure of province, district, commune and village. There are 24 provinces in the country, which include the municipality of Phnom Penh and the "Krong" or "Towns" of Preah Sihanouk, Kaeb and Pailin. These provinces are divided into 183 districts, which are subdivided into 1,609 communes containing 13,406 villages. Census enumeration covered the entire inhabited geographical areas with the exception of a few areas in the north-western provinces bordering Thailand, which were inaccessible during the census due to military operations. The population in these excluded areas is estimated to be about 45,000. The refugee population, temporarily displaced to Thailand, was not included in the census as it was conducted on a de facto basis.

The 1998 Census was held under the authority of a Royal Decree on the organization of the General Population Census of Cambodia. According to this Decree, the Ministry of Planning is responsible for the General Population Census with the National Institute of Statistics (NIS) as the implementing agency. The Decree inter-alia ensures confidentiality of personal information collected in the census.

The National Committee for the General Population Census of Cambodia, under the chairmanship of HE Deputy Prime Minister and Co-Minister, Ministry of Interior, had the responsibility for instructing, deciding and endorsing all general items of work pertaining to the census. The Census Technical Committee with HE Minister of Planning as chairman dealt with technical issues relating to the census. In the conduct of the census, the population census office of the National Institute of Statistics (NIS) under the Director of Census was the central unit that served as the monitoring, communication and action centre for the census.

### 1.2 Census Questionnaires

[TOC](#)

Two questionnaires were used in the 1998 Census of Cambodia (see Annexes 1 and 2). These were called: Form A: Houselist and Form B: Household Questionnaire. Form A: Houselist which was canvassed during the preliminary round was used to collect the following information in respect of buildings which had households in them: Building/Structure number, predominant construction material of wall, roof and floor of building, whether building is wholly or partly residential, household number, and name and sex of head of household and number of persons usually living in the household.

Form B: Household Questionnaire had four parts: - Parts 1, 2, 3, and 4. This was used for census enumeration during March 3 to 12, 1998 in all households. In Part 1, information on usual members of household present on Census Night (March 3, 1998),

visitors present on the Census Night and usual members absent on Census Night was collected.

Part 2 of Form B, was used to collect the following information in respect of each usual member of household present and each visitor to household: Full name, relationship to head of household, sex, age, marital status, mother tongue, religion, birth place, previous residence, duration of stay, reason for migration, literacy, full time education and economic characteristics.

In Part 3 of Form B, fertility information of females aged 15 and over in the household was collected. In Part 4 of Form B, following information was collected on housing conditions and facilities: basis of occupancy of the dwelling by the household (like owner occupied or rented), main source of light available to the household, main cooking fuel used by household, whether toilet facility was available within premises, main source of drinking water supply for the household and number of rooms occupied by the household.

### **1.3 Census Publicity** [TOC](#)

For successfully conducting the census in a country, which did not have a census for a long time, people had to be informed well in advance about the scope and purposes of the census to get their co-operation. They had to be requested to co-operate by giving truthful information. The enumerators had to be requested to record correctly the information given by respondents. The public had to be convinced that the information collected in the census would be kept confidential. To achieve all these, a complementary project called “Advocacy and Public Information Campaign for the Population Census” (CMB/97/P08) was executed by UNESCO with UNFPA funding.

### **1.4 Census Enumeration**

About 25,000 enumerators and 8,350 supervisors, drawn mostly from teachers were specially trained for carrying out the enumeration by visiting each and every household. The census was conducted on a *de facto* basis. The census was spread over a period of ten days from March 3 to 12, the census reference time being the midnight (00 hours) of March 3, 1998. It covered all persons staying in Cambodia at the reference time including foreigners. Foreign diplomatic corps and their families, were, however, excluded. Special arrangements were made to enumerate homeless population, those staying in hotels and guesthouses, transient population and those living in boats on the night of March 2, 1998. The census was preceded by the preliminary operation of houselisting during February 27 to March 2, 1998.

### **1.5 Data Processing** [TOC](#)

The main post-census activity of the Data Processing Division was the manual coding and editing of census documents, data entry from the questionnaires, computer editing and tabulation and the generation of various dissemination products.

The manual coding and editing of the census documents was done in two stages. First, the summary statements were scrutinised and edited. This provided the basis for the provisional census results. The second stage concentrated on the coding, editing and data entry of the main census questionnaire (Form B).

Computer editing was performed to remove errors and inconsistencies in the data sets. A large number of statistical tables were generated at various geographical levels.

## **1.6 About this Report** [TOC](#)

The present report contains an analysis of literacy status and educational levels in Cambodia. Information on literacy status, highest educational level completed, and the status of school attendance as of March 3 1998 was collected for all persons in Part 2 of Form B Household questionnaire. This formed the basis for the analysis contained in this report. The census priority tables which constituted the main source of data for this report and the supplementary tables specially generated for the analysis may be found in Annexes 3 and 4 (national level only). Maps included in this report were generated using PopMap software. In the tables included in the text, "Not Reported" category figures have been distributed proportionately unless otherwise stated.

The results were discussed thoroughly at two in-country workshops conducted by advisers from UNFPA/CST, and ESCAP. Trained national staff of NIS and Ministry of Health participated in the workshops. The international staff of the census project assisted in organising the workshops and co-ordinating follow-up activities.

## CHAPTER II

### LITERACY AND EDUCATION

#### 2.1 Introduction [TOC](#)

In traditional Khmer society, education was the domain of the local Buddhist temple or wat. The students, all young boys, were taught by monks whereas, young girls were taught by their parents especially by the mothers during the onset of puberty “chaul molub”. During this period, they learned to be good wives, mothers, and household managers. Country girls rarely completed primary education. Where there were no schools, only the pagoda offered the rudiments of literacy but girls were barred from participating. In towns, even middle class families frowned on their daughters’ educational advancement. Despite achievements in education over the years, the usual injunction remained “she will get married anyway”. But the advancement of the civilization gradually eroded those concepts and modern Cambodia tried to go along with the rest of the world in giving educational opportunities to both girls and boys as the society gradually accepted the importance of education to both girls and boys. The education system gradually developed during 1950-1975.

The education advancement, however, encountered a major setback during 1975-1979, which witnessed destruction of much of the educational and intellectual infrastructure of the country. The achievements made in the education sector in the 1960s and 1970s were systematically decimated as the Khmer Rouge destroyed schools, education equipment and books and effectively abolished schooling, with the exception of vocational training. The educated and professional segments of society were systematically persecuted, killed or forced to leave the country. It is estimated that 75-80 per cent of teachers and secondary students fled or died during these years (Asian Development Bank, 1996).

However, since 1979, efforts have been made to reopen schools and recruit teachers. Persistent efforts, in more than a decade of rehabilitation and reconstruction, have enabled the Cambodian educational system to rebuild some foundation. “Despite the effort to rehabilitate the education sector, the Cambodia population is still facing enormous difficulties in reaching literacy, completing primary school, and having access to upper schooling infrastructures. The education sector lacks schools, teachers, adequate salary for the trainers, teaching materials and updated teaching methodologies.” (Ministry of Women’s and Veterans' Affairs, 1999).

Various measures are being taken in the country to raise the literacy rate. The expansion of primary education is the major contributing factor in raising the literacy rate. Besides, various Government and non-governmental agencies are carrying out adult education activities.

#### 2.2 Sources of Data and Limitations [TOC](#)

In the 1998 Census, questions on literacy status, attainment of the highest grade and school attendance were asked for each person. By definition all children aged 6 years or less were treated as illiterate. For those attending a school or educational institution, the highest grade or level completed were ascertained.

Data on educational characteristics of the population can be found in a variety of sources. A distinction can be made between reports of the school system, on the one hand, and censuses and surveys, on the other hand. In Cambodia, education statistics are collected by the national government through a reporting process in which individual schools fill up Annual School Census Form (ASCF), which is then sent to local governmental units which, in turn, submit the information through a hierarchy of governmental units to the national government.

Care should be taken in comparing census data with other sources since there may be differences in the definition and the time period covered. The census recorded information during March (second part of school year) and the attainment was reported for the highest level completed for the previous school year, whereas government sources report as of the beginning of school year (October-December). Regarding the number of students who are attending school at present, government sources collect information for the start of the school calendar (October-November), whereas the census recorded this as of 3rd March 1998 (Ministry of Education, Youth and Sport, 1999).

### **2.3 Educational System in Cambodia**

[TOC](#)

At present, in Cambodia, general education is basically divided into four levels: primary, lower secondary, upper secondary and graduate and above. The nine years basic education subsumes six years of primary schooling and three years of lower secondary education. Three years are devoted to upper secondary education, which has its equivalent in the technical and vocational training. Skill development includes technical education and vocational training. The students need to pass the examination after completion of lower secondary and secondary schooling. There are nine universities and technical institutes in the country, which require passing an entrance examination prior to admission. While primary schooling is officially free in Cambodia, parents typically have to pay significant amounts for their children's primary schooling (Ministry of Planning, 1999).

The Ministry of Education, Youth and Sport (MOEYS) has 23 provincial and municipal education services (Siam Reab and Otdar Mean Chey constitute one service) each manned by one director, deputy directors and technical officers following central department structure (since 1999-2000, the two provinces were segregated into 2 provincial education services). The district or "Khan" office supervises all primary schools in the area whereas the provincial/municipal office provides technical support to lower secondary and upper secondary schools. The Ministry has the following policy mandates (Ministry of Education, Youth and Sport, 1999a):

1. Creation of opportunities for children in all regions and ethnic groups; to complete primary education and achieve nine years of full basic schooling through 75 per cent of primary schools with complete range of grades or multi-grade teaching methods;
2. Increasing access of children aged 12-14 years especially girls to secondary schools through expansion of core schools to lower secondary institutions;
3. Improving quality of instruction through teacher retraining, increase in the number of learning hours and provision of textbooks;
4. Restoring physical infrastructure and building new schools;

5. Developing important sub-sectors e.g. non-formal education, higher education, and technical and vocational training;
6. Enhancement of education administration and management through documents development and appropriate guidelines; and
7. Organization of functional literacy classes.

## 2.4 Analysis of the Census Data [TOC](#)

As mentioned earlier, information on literacy status in the 1998 census was recorded of each person, irrespective of age, but population aged 6 years and below have been all grouped together as illiterate. Therefore, literate population in this analysis covers literate population aged seven and above unless specifically mentioned.

The classification of the educational levels of the literate population follows general pattern of classification in Cambodia and are: none (literate but no formal education), primary not completed (grade 1 to grade 5), primary completed (grade 6 to grade 8), lower secondary (9 to 11 levels), secondary school/diploma (12 to 13 levels), undergraduate, graduate/degree holder and post graduate. For analysis purposes, secondary and above is the last category in the educational level completed. Besides, literacy and educational attainment were related to other factors to describe the magnitude and pattern of educational levels in the country.

## 2.5 Literacy Status

Cambodia has the second lowest adult literacy rates among nearby countries; only Lao People's Democratic Republic has lower rates. Table 2.1 indicates the level of literacy of nearby countries. In 1980, Cambodia had the highest difference in the literacy rate

**Table 2.1 Adult Literacy Rate in Different countries**

[List of Table](#)

Country	Adult Literacy Rate					
	1980			1995		
	Males	Females	Difference	Males	Females	Difference
Cambodia	74	23	51	80*	57*	23*
Indonesia	78	58	20	90	78	12
Lao PDR	56	28	28	69	44	25
Malaysia	80	60	20	89	79	10
Myanmar	86	66	20	88	78	10
Thailand	92	83	9	96	92	4
Viet Nam	92	76	16	95	88	7

\* 1998 Census Results

between males and females but has been able to reduce the gap by more than half by 1998. Compared with the other countries, the reduction is striking. The female literacy rate has shown impressive progress, increasing by one and a half time between 1980 and 1998.

## 2.5.1 Rural –Urban Difference in Literacy Rate

[TOC](#)

Table 2.2 gives the literacy rate of the population seven years and over by sex and urban-rural residence. The overall literacy rate is about 63 per cent with a higher level in urban than rural areas. Besides, male literacy rate is higher. A comparison of female and male literacy in urban areas reveals a difference of 12.8 percentage points

**Table 2.2 Literate Population Aged 7 and over and Literacy Rates by Residence and Sex**

Sex	Residence	Population Aged 7+	Literate Population	Percentage Literate
Both Sexes	Cambodia	9,201,498	5,778,369	62.8
	Urban	1,498,343	1,131,104	75.5
	Rural	7,703,155	4,647,265	60.3
Males	Cambodia	4,371,495	3,104,889	71.0
	Urban	725,726	595,706	82.1
	Rural	3,645,769	2,509,183	68.8
Females	Cambodia	4,830,003	2,673,480	55.4
	Urban	772,617	535,398	69.3
	Rural	4,057,386	2,138,082	52.7

Source: Final Census Results, NIS, 1999

in favour of males. In rural areas, the difference was larger (16.1 percentage points). An examination of these rates among the population 15 years and above (Table 2.3) shows higher rates. The sex difference is also higher.

**Table 2.3 Adult Literacy Rates for Population Aged 15 and over by Sex and Residence**

Residence	Both Sexes	Males	Females	Difference
<b>Cambodia</b>	<b>67.3</b>	<b>79.5</b>	<b>57.0</b>	<b>22.5</b>
Urban	79.1	88.3	70.8	17.5
Rural	64.9	77.6	54.3	23.3

## 2.5.2 Age-Sex Differentials in Literacy

[TOC](#)

Analysis of the differentials by age group (Table 2.4) reveals a widening of the gender gap with age progression. The difference (in favour of males) in the age group 55-64 is nearly five times that in the age group 15-24. The findings point to an improvement in the educational status of the population as attested by a relatively smaller percentage of the younger population who are illiterate. It can be seen that within each sex group, the adult literate rate declines with age progression.

**Table 2.4 Adult Literacy Rates by Age Group and Sex**

Age Group	Both Sexes	Males	Females	Difference
<b>Total 15+</b>	<b>67.3</b>	<b>79.5</b>	<b>57.0</b>	<b>22.5</b>
15-24	76.3	81.8	71.1	10.7
25-34	73.4	81.5	66.0	15.5
35-44	66.7	78.0	57.8	20.2
45-54	63.7	83.8	49.0	34.8
55-64	43.8	73.7	21.6	52.1
65+	30.5	58.7	10.4	48.3

Source: Final Census Results, NIS, 1999

### 2.5.3 Literacy Status in Relation to other Characteristics

[TOC](#)

The relationship between literacy status and socio-demographic characteristics is given in the tables 2.5 to 2.7. Literacy status of the population affects their socio-economic and demographic behaviour but the reverse is also true i.e. socio-economic conditions affect the literacy status of the population. That fertility behaviour of women is affected by the literacy status of the population is confirmed by Table 2.5 which exhibits the age-specific fertility behaviour of females aged 15-49 by literacy status. In all the age

**Table 2.5 ASFR and TFR by Literacy Status of Women Aged 15-49**

[List of Table](#)

Literacy Status	ASFR						TFR	
	15-19	20-24	25-29	30-34	35-39	40-44	45-49	
Illiterate	0.0583	0.2458	0.2798	0.2501	0.2092	0.1123	0.0308	5.9
Literate	0.0419	0.2141	0.2508	0.2182	0.1460	0.0821	0.0257	4.9

Source: Analysis of Census Results: Report 1-Fertility and Mortality, NIS 1999

groups, age-specific fertility rates are found to be higher for illiterate than literate women. There is a difference of one child in the TFR between literate and illiterate women.

**Table 2.6 Literacy and Mortality**

**Indicators**

[List of Table](#)

Literacy Status of Women	Infant Mortality Rate at Birth	Life Expectancy
Illiterate	96	52.7
Literate	70	58.9

Source: Analysis of Census results: Report 1-Fertility and Mortality, NIS, 1999

Table 2.6 gives information on infant mortality rate and life expectancy at birth of children born to women aged 15-49 by literacy status. The infant mortality rate of children born to illiterate women is higher by more than one third than that of literate women. Similarly, children born to literate women are expected to live, on average, 6 years more than those born to illiterate women. This clearly reflects the role of literacy of women in influencing the mortality of their children.

Table 2.7 shows the singulate mean age at marriage (SMAM) of the population by literacy status. The singulate mean age at marriage in Cambodia is already high compared with many developing countries. Yet literacy has a measurable impact on SMAM.

**Table 2.7 SMAM by Literacy**

[List of Table](#)

Literacy Status	Males	Females
Illiterate	23.0	22.2
Literate	24.4	22.6

Source: Analysis of Census Results: Report 2- Nuptiality, NIS, 1999

Table 2.8 presents the employment and unemployment rates of population aged 15 and above by literacy status. There is insignificant difference in the employment rates between literate and illiterate population. It reveals that literacy status of the males and females have very small influence on their employment opportunities. This may be because agriculture, which is the mainstay of the majority of the population, does not call for literacy.

**Table 2.8 Employment and Unemployment Rates for Population Aged 15 and above by Literacy Status** [List of Table](#)

<i>Rate</i>	<i>Literate</i>		<i>Illiterate</i>	
	<i>Males</i>	<i>Females</i>	<i>Males</i>	<i>Females</i>
Employment Rate	95.5	93.4	94.8	95.1
Unemployment Rate	4.5	6.6	5.2	4.9

Source: Table B2

#### 2.5.4 Provincial Differentials in Literacy Rate

[TOC](#)

Table 2.9 (See also Maps 2 and 3) gives the literacy rate of the population aged 7 and above for different age groups by sex and province. It reveals that barring Phnom Penh, all provinces have literacy rates below 80 per cent. Rotanak Kiri has the lowest literacy rate among the provinces. Twelve provinces have each a literacy rate higher than 60 per cent including Phnom Penh and six provinces have rates below 50 per cent.

Among children aged 7-14 also, the highest literacy rate is recorded in Phnom Penh and the lowest in Rotanak Kiri. All provinces have low differences in the literacy rates between boys and girls; Svay Rieng has the highest difference of 3.9 percentage points. Five provinces have a difference of less than 1 per cent. All provinces except Kracheh have recorded higher literacy rates for boys compared with girls. Among adults, the literacy level of men is considerably higher than that of women in all provinces. The highest rates in respect of males and females are recorded by Phnom Penh and the lowest rates by Rotanak Kiri.

The lowest difference in the adult literacy rates between males and females is recorded by Phnom Penh. In 22 provinces the percentage point difference in the adult literacy rates between males and females ranges from 20 to 30; only in two provinces (Phnom Penh and Kracheh), the difference is below 20 percentage points.

#### 2.6 Educational Attainment

[TOC](#)

Table 2.10 shows that at age 25 and over there are proportionately more females than males who have not completed primary education or have no educational attainment at all. The situation is reversed for those who have acquired a primary education and beyond. On the whole, 68.3 per cent of literate females have some primary education or less. The corresponding percentage for males is 51, a 17.3 percentage points difference. About 20.3 per cent of literate males have attained lower secondary education and higher compared to 12.1 percent of literate females. This shows a marked disparity in educational levels by sex, which is a by-product of the social, economic and cultural environment that limits female education. The structures, organization and delivery systems related to education, have not responded adequately to the needs of the population they are intended to serve.

Note: Others and not stated who constitute only 0.6 percent of the total population have been proportionately

For example, the wide dispersal of communities in Cambodia, particularly in remote and mountainous areas, limits girls' access to schools. Parents' concern over the safety of their daughters who must travel far to the nearest school is a deterrent factor. Despite pronouncements of equal opportunity and access to education by both boys and girls, gender disparities are quite evident in educational attainment. After primary education, the inability to retain the girls through higher levels is reflected in the dramatic increase in dropout rates. The Ministry of Women and Veteran's Affairs indicates that "aside from the practical necessities which often force girls to abandon their schooling, other obstacles, such as the long distance to schools and enrolment fees and payments, make parents more willing to invest in the education of boys as the anticipated rate of return to the family and society is considered to be higher" (Ministry of Women's and Veterans Affairs, 1997).

Table 2.11 reveals the percentage of the literate population aged 25 and over by educational attainment (i.e. the highest grade completed) by residence. It is noted that about 2 per cent of the literate population have not attained any educational level at all. The predominant level of education is primary not completed among both urban and rural literate population. In this category, there are proportionately more females in

both areas. The educational disparity by sex becomes marked at the higher educational levels. If the educational attainments of lower secondary and secondary and above are combined and examined, male proportion is higher than that of females both in rural and urban areas. As expected, urban educational attainment is higher than in rural areas.

Clearly, there are urban-rural and sex differentials in the educational attainment of the population. Rural females are the most disadvantaged and urban males enjoy comparatively higher educational levels, as more than a third of males have attained lower secondary education or more (Table 2.11).

## 2.7 Correlates of Educational Attainment

Educational attainment has a bearing on some of the socio-economic characteristics and *vice-versa*.

### 2.7.1 Age at Marriage [TOC](#)

The examination of singulate mean age at marriage (SMAM) by sex and education (Table 2.12) shows that differences are not discernible from those with no educational attainment until the completion of primary education. However, an upturn is observed after the attainment of lower secondary and secondary and above. The differentials in sex widen at upper two levels. The difference in SMAM between those with no educational attainment and secondary and above education is 4.1 years for males and 3.2 years for females.

### 2.7.2 Marital Status

The decision to postpone marriage or not to marry at all is a function of the social and economic situation of individuals. It is shown in Table 2.13 that both males and females, who are 25 years of age and beyond and are not yet married, have higher education as reflected in the larger percentage of those with secondary schooling and beyond compared to their married counterparts. Among those who are not married, 21 per cent of males and 7 per cent of females have at least an upper secondary education. The corresponding percentages for the married group are 5 for

males and 2 for females. These differentials are maintained by urban and rural residence.

In urban areas, more than a third (35 per cent) of never married males have secondary education and above. The percentage for married males is 15. For females, 16.9 per cent of the unmarried are in the same educational level as opposed to about 7 per cent among the married.

Source: Table CST4, Analysis of Census Results: Report 2, Nuptiality, NIS, 1999

Among rural males, the percentage point difference between the unmarried and married among those with upper secondary education is 9.1. Among the unmarried females in rural areas 2.84 per cent have achieved the same educational level, compared with 1.3 per cent of the married.

### 2.7.3 Fertility

[TOC](#)

Education is a predictor of fertility and child survival as is evident from table 2.14. A two children difference is noted between women who have completed their reproductive span (45-49 years of age) with no education (5.7 CEB) and those with secondary

education and over (3.6 CEB). The probability of survival of a woman's children increases with her acquisition of upper secondary schooling or more (80.3 per cent compared to 86.0 per cent).

**Table 2.14 Average Number of Children Ever Born (CEB) and Children Surviving for Literate Women 45-49 Years of Age by Educational Attainment**

#### **2.7.4 Employment and Occupation** [TOC](#)

The educational level of the population is a discriminant of eventual occupational and employment levels. Therefore, to improve the socio-economic and welfare status of the population, improvement in education level is important.

Table 2.15 shows the percentage distribution of literate employed males and females in each educational category by broad group of occupation and residence. It indicates that the level of educational attainment directly correlates with the occupation of a person.

The proportions of males and females absorbed by agriculture and fishery decrease generally with increase in educational attainment. The opposite trend is observed in respect of white-collar occupations. In the case of blue-collar category the percentage of workers absorbed increases with increase in educational level up to lower secondary and then declines.

In the case of better-educated persons with secondary and above educational attainment, the percentages of white-collar and blue-collar workers in urban areas are higher than the corresponding percentages in rural areas. In the rural areas more than one-fifth among males and nearly 30 per cent among females who have secondary and above qualification work in agriculture and fishery. The corresponding percentages in urban areas are less than two, which indicates that the rural people comparatively have lesser opportunities to move away from traditional agricultural and fishery operations to take up white-collar jobs.

Females with higher educational attainment (lower secondary and above) have better chances of getting blue and white-collar types of jobs than their male counter parts. This is true in both urban and rural areas with greater chances for educated females in the urban areas compared with their rural counterparts.

#### **2.7.5 Migration** [TOC](#)

Education is one of the important reasons for the movement of population from one place to another. Many young people tend to migrate in order to further their education. As the level of education is not high in Cambodia, only 2.1 per cent of all migrants reported making their most recent move for the purpose of education. Education may indirectly promote migration because better-educated persons have more job opportunities and perhaps better knowledge about their destination. As may be seen

from Table 2.16, migrants in the age group 15-29 have higher educational levels compared with older migrants. As expected, male migrants have better education than female migrants although the levels for both the sexes are higher in urban than in rural areas. For example about 19 percent of male urban migrants, 15-29 years of age, have education at secondary school and above levels compared with about four percent of rural male migrants in the same age group. The corresponding percentages are 8.7 and 1.5 for female migrants.

A comparison of Tables 2.16 and 2.17 clearly bring out that the percentage of literate population in general and literate population in educational levels primary completed and above, are higher in respect of migrants compared with non-migrants. The highest difference (about 10 points) in literacy levels between migrants and non-migrants among males is observed in the working age group 30-44. Among females, the highest difference in literacy (11 points) between migrants and non-migrants is noted in the age group 45-59, which is also predominantly a working age group.

In the urban areas the difference in literacy levels between migrants and non-migrants among males is the highest in the age group 30-34 with 13 points. For females this difference is the highest with 22 points in the age group 45-59.

Comparing the educational levels of migrants and non-migrants it is observed that among male migrants, about 43 per cent have educational levels primary completed and above. The corresponding percentage among male non-migrants is only about 25 per cent. Among female migrants about 23 per cent have this level of education whereas only 14 per cent among female non-migrants have that educational level. Those qualified at secondary school level and above constitute 6.65 per cent among male migrants and only about one per cent among male non-migrants. The corresponding percentages among female migrants and non-migrants are 2.42 and 0.43 respectively.

## **2.8 Differentials in Educational Attainment by Province**

[TOC](#)

Table 2.18 reveals the provincial differentials in the percentage of educational attainment of population aged 7 and above and Table 2.19 reveals the same for adult population. Phnom Penh has the highest percentage of those who have completed primary and above and Preah Vihear has the highest for none and primary not completed (combined). Takaev has the highest percentage of male adult population completing primary education whereas Phnom Penh has the highest for the females. In the cases of lower secondary and secondary and above, Phnom Penh has the highest percentage for both sexes among all provinces. As already noted, Phnom Penh has also the highest percentage of the literate population aged 7 and above.

Among the total literate population 15 years and above, 16 per cent have acquired at least a lower secondary education (Table 2.20). The level is higher for males compared with females. An analysis of educational attainment of at least lower secondary level of the population 15 years and above indicates wide variations by province from 8.4 per cent in Preah Vihear to 36.5 per cent in Phnom Penh. The provinces that show lower secondary school attainment of less than 10 per cent are Otdar Mean Chey and Preah Vihear, both belonging to the mountain region. Dichotomy by sex shows a consistent male edge over female in enrolment in secondary education and above. Phnom Penh has

recorded the highest male-female difference (18.1 percentage points). The differentials are narrower in Rotanak Kiri and Siem Reab (3 to 4 percentage points). On the whole, the data show that there is so much room for improvement in terms of attaining a higher educational level and closing the gender gap.

## 2.9 School Attendance [TOC](#)

In the census, information on school attendance was collected for all persons irrespective of age. But for analysis purpose, only population aged 7 and above are considered. It can be noted in Table 2.21 that only 30 per cent of males and 22 per cent of females aged 7 and above are attending schools or any academic institutions, urban areas having higher attendance rate than rural areas. The sex difference is about 8 percentage points in both urban and rural areas. Sixty-four per cent of the total population in the age group 7-14 attend schools. This drops to 40 per cent and to 8 per cent in age groups 15-19 and 20-24, respectively. Less than 4 per cent difference can be observed between the attendance rates of males and females in the age group 7-14, but this increases to about

20 percentage points in the age group 15-19. For both age groups, urban areas show

Source: Final Census Results, NIS, 1999,

higher percentage of attendance than the rural areas.

The relatively low enrolment and high dropout rates among girls can be attributed to a combination of factors. The involvement of young girls in domestic chores and sibling

care prevents them from attending school regularly, leading to the ultimate withdrawal from school. It is girls from poor households and lower occupational hierarchy who are more likely to be out or withdrawn from school.

Table 2.22 gives for each age, attendance rates in schools by sex in rural and urban communities. In rural areas, from age 13 onward, males have a decided advantage in school enrolment over females. For example at age 13, the percentage point difference is 8.2. At age 14, the difference is 14.1 and by age 17, the gap is 23.1 percentage points. In urban areas, corresponding differences are 5.2, 10.8 and 22.5 respectively

clearly heralding the widening of the difference with age progression.

### 2.9.1 School Attendance and Employment [TOC](#)

An examination of employed persons of specific ages who are attending school indicates a lower percentage of females who are employed and are attending school. At the age of 11, 9.8 per cent of working females are attending school compared with 13 per cent of males (Table 2.23). At age 14, the percentages are 7.8 for females and 10.8 for males. While employment detracts from school attendance, the females are further disadvantaged by a low proportion simultaneously working and attending school.

Girls are less likely to attend school than boys for several reasons. First, there is the perception among parents that the schooling of boys offers greater future rewards in terms of career opportunities and market wages – a common viewpoint that boys are significantly more likely than girls to take up wage or salaried employment in adulthood. Adult employment refers to work activity, which typically offers large pecuniary rewards for higher level of schooling. Parents perceive that since girls are more likely to stay home and take care of their families or work in farms, their education would offer few tangible benefits. It is possible that parents pull girls out of school much earlier than boys since the opportunity cost of enrolment is greater for girls than for boys. Parental discrimination may also account for the generally lower rate of grade repetition among

Source: Table B20

girls. Where parents pull out their daughters from school, the possibility of returning back is lower than for boys. As girls are responsible for household chores and sibling care, their time for the family is more valuable than for boys. As a typical rural household is about 40 minutes away from the nearest lower secondary school, most students have to walk as public transport is neither available nor affordable. Few, if any, schools provide separate dormitory accommodation for girls. Parents are, therefore, reluctant to send their daughters for secondary education away from home for fear of their safety.

The relationship between employment and school attendance for children and adolescents in rural areas reveals that a slightly higher percentage of females 5-9 years of age (69.9 per cent) than males (66.2 per cent) have never attended school (Table 2.24). Past and current attendance is by and large higher for males. For example at age 15-19 years, 72.5 percent of employed males have ever attended school, as opposed to 66.2 per cent of employed females.

Up to age 10, the gender disparity in the proportion of employed persons attending

school is not marked. However, with age progression, a lower percentage of working females goes to school (Table 2.24). This might be related to the type of work females take, such as shop-keeping or garment factory activities which require them to be in the workplace during the day.

## 2.9.2 School Attendance by Province

[TOC](#)

In the 1998 Census, questions were asked of each person as to whether he/she ever attended school/educational institution. If a person said “Attending Now” or “Attended in the Past”, the highest educational level completed was recorded.

For the purpose of tabulation, those attending school/educational institution (i.e. at the time of the census) were classified by their educational attainment. Hence, the educational levels mentioned in the priority Table B3 and Tables 2.25 and 2.26 in the text refer to the highest educational attainment of those attending school/educational institution.

Table 2.25 indicates the percentage distribution of literate children aged 7-14 who were attending school/educational institution by educational attainment in Cambodia and each province at the time of the census. Among the provinces, Phnom Penh records the highest percentage of school attendance by those who have completed primary level followed by Krong Preah Sihanouk. In rest of the provinces, less than 10 per cent of the children attending school/educational institution have completed primary level (i.e. completed grades 6-8). Krong Pailin has the lowest percentage of attendance by those with primary level education. By gender, there is not much difference in the proportion attending between males and females with primary level education and the highest sex difference (2.5 percentage points) in this category has been recorded in Mondol Kiri province. As regards proportion attending with lower secondary education, Phnom Penh and Krong Preah Sihanouk have crossed one per cent level and do not reveal much sex differences.

Table 2.26 indicates for Cambodia and each province the percentage distribution of adult population aged 15 and above who were attending school or educational institution at the time of the census by completed educational level. It reveals that a significant percentage of school going adults have not completed primary level of education. The highest percentage of adults attending school who have completed primary level is in Svay Rieng province and the lowest in Rotanak Kiri province. Phnom Penh, Krong Preah Sihanouk and Kandal are the provinces which have more than 20 per cent of the adult population attending school, who have completed lower secondary level. The lowest proportion is recorded in Otdar Mean Chey province. Phnom Penh is the only one province in which the percentage of adult population attending school/educational institution with secondary and higher levels of education has reached a double figure.

As regards the proportion of adult population attending school/educational institution who have completed primary level, the highest sex difference occurs in Svay Rieng province (8.4 percentage points), followed by provinces of Otdar Mean Chey (8.0) and Prey Veang (7.4).

Note: (i) M=Males F=Females T=Both Sexes

(ii) The categories "Other" and "Not reported" have been excluded.

**Map 4 Percentage of Males Aged 7 to 19 Who are Attending School by Province,1998**

**Map 5 Percentage of Females Aged 7 to 19 Who are Attending School by Province, 1998**

The highest difference between the proportions of males and females attending school/educational institution with lower secondary educational attainment is seen in OKrong Preah Sihanouk (5.9 percentage points) followed by Takaev province (5.8 percentage points). In Phnom Penh and Kracheh provinces the percentage of females attending with lower secondary educational attainment is slightly higher than that of males.

As regards the proportion of population attending with secondary and higher level of educational attainment, sex differential is the highest in Phnom Penh province (9.3 percentage points). In rest of the provinces the percentage difference is not more than two points with 15 provinces having less than one percentage point. Rotanak Kiri, Siem Reab and Krong Kaeb are the three provinces in which the females have marginally higher percentages of attending school/educational institution than the males.

## **2.10 Key Challenges** [TOC](#)

The key challenges to ensuring equality of access to education by girls and boys are as follows:

1. Retainment of the children in school particularly girls
2. Promotion of enrolment in higher education
3. Development of new approaches in community-based non-formal education to accommodate males and females to increase literacy
4. Strengthening the local government and communities in managing community learning centers in areas where there are no schools

Factors affecting the education of girls and women are varied and complex. They interact in many ways. Equality of access to education by boys and girls cannot be ensured until the system is improved and teachers are accorded the status and remuneration commensurate to their tasks. Non-formal and continuing education should be an integral part of the education system. One of the most urgent challenges facing education is to provide girls and women with the confidence, skills and knowledge that will enable them to make choices and participate fully in development.

This is not just a matter of legislation. It requires profound changes in parental and government attitudes that can only be brought about by means of a critical review of present methods of educational policy formulation. The increased participation of boys and girls in education and in decision-making requires positive intervention programmes. This takes into account the education of parents, teachers, fieldworkers, administrators, policy makers and others to increase their awareness of the importance of education. A more equitable society cannot be achieved without greater female involvement and power sharing in both the public and private spheres.

## **2.11 Summary and Conclusions** [TOC](#)

Education, especially female education has been considered an important aspect of economic and social development in Cambodia. Despite the profound concern of the government with the low educational attainment of the population and the recognition of the need to bring women into the mainstream of development through education, efforts have been undermined by the lack of manpower and resources. A review of education indicators showed a wide geographical variation in the number of schools and students. the low level of education of both males and females is noted.

Analysis of the 1998 census data has revealed the following:

- a) There is a sex differential in literacy rate with levels of 71 per cent for males and 55 per cent for females. While literacy rate is 82 per cent among men in urban areas, the corresponding percentage among females is 69 per cent. In rural areas, the percentages are 69 and 53, respectively. Literacy level has an impact on fertility, infant and childhood survival, age at marriage and employment rates.
- b) Provincial variations in literacy exist. The lowest level among the population 15 years and over is obtained in Rotanak Kiri, and the highest in Phnom Penh. Among males, only 39 per cent can read and write in Rotanak Kiri. Among females, only 24 per cent are literate in Mondol Kiri.
- c) An analysis of educational level completed among the population 25 years and over shows that 20.3 per cent of males had at least a lower secondary education compared to 12 per cent in females. Provincial differentials exist with regard to educational levels. The percentage of persons aged 15 years and above with at least a lower secondary educational level varies from 8.4 in Preah Vihear to 36.5 in Phnom Penh.
- e) A high drop out rate among females particularly after primary schooling is observed.
- f) Female educational level is inversely related to fertility and childhood mortality.
- g) The occupational and employment structure of the population is strongly linked to educational attainment.
- h) Migrants are relatively better educated than non-migrants.

Aside from lack of resources to make schools accessible to the population, the disadvantage of girls in availing of the educational opportunities emanates from the societal attitude toward female education. A strong advocacy programme directed toward the improvement of education in its reach and quality is required.

The findings from the census data analysis pose key challenges to policy makers:

- a) The need to promote universal primary education with particular focus on provinces where literacy level is low - Mondol Kiri, Rotanak Kiri, Otdar Mean Chey, Preah Vihear and Siam Reab.
- b) Advocate for children's education in specific areas- Otdar Mean Chey, Rotanak Kiri, Mondol Kiri, Kaoh Kong, and Kampong Thum.
- c) Campaign for students to remain in school and acquire higher education (at least lower secondary education).
- d) Ensure that the facilities, manpower and infrastructure are in place in these disadvantaged provinces to facilitate the promotion of education.  
Provide alternatives to formal education if resources constrain such initiatives.

**Adult Literacy Rate**

Percentage of persons aged 15 and above who can read and write

**Age-Specific Fertility Rate (ASFR)**

The number of births occurring during a 12 month period to women of a specified age group per women in that age group.

**Economically Active and Inactive Population**

*Economically Active* population includes those who are employed and unemployed among population aged 7 and over. Unemployed is divided into *unemployed (employed any time before)* and *unemployed (never employed any time before)*.

*Economically Inactive population* includes homemakers, full time students, dependents, rent-receivers, retired people, and other categories of income recipients, and others who are neither employed nor unemployed and also do not come under any of the inactive categories mentioned.

The reference period for economic characteristics is the one year proceeding the census date. Main activity is defined as the activity during at least 6 months (183 days) or more during that year.

**Educational Level**

Educational level refers to completed level. The classification of educational level adopted in the census is shown below along with the corresponding grades completed (within brackets):

*Primary Not Completed (Grades 1 to 5),  
Primary (Grades 6 to 8),  
Lower Secondary (Grades 9 to 11),  
Secondary School/Diploma (Grades 12 to 13),  
Undergraduate (Grade 14),  
Graduate/Degree Holder (Grade 15) and  
Post Graduate (Grade 16).*

**Employment Rate**

Percentage of employed persons to economically active persons.

**Infant Mortality Rate (IMR)**

Number of deaths of children under one year of age during a year per 1,000 live births.

**Life Expectancy at Birth**

It is the average number of years that a member of a “cohort” of births would be expected to live if the cohort were subject to the mortality conditions expressed by a particular set of “age specific mortality rates”.

## **Literacy**

Ability to read and write with understanding in any language. By definition all children of the age of 6 years or less are treated as illiterate.

## **Marital Status**

Four categories were used in the enumeration:

*Never Married*  
*Married*  
*Widowed*  
*Divorced*

During the enumeration, persons who had never entered into any form of marital unions were recorded as never married. All persons who defined themselves as married were recorded as married. Persons who were widowed or divorced but had married at the time of enumeration were recorded as married. All persons who, at the time of the enumeration, were contractually married but were not living as a man and wife, were also included under married category. Both legal and de facto separations were recorded as Separated,

## **Occupational Categories**

Occupation refers to the kind of work done during the time-reference period established for data on economic characteristics by the person employed (or performed previously by the unemployed) irrespective of the industry or the status in which the person should be classified.

Major Groups of Occupations as defined in the International Standard Classification of Occupations (ISCO) and used in the 1998 Population Census are given below with their codes:

1. *Legislators, Senior Officials and Managers,*
2. *Professionals,*
3. *Technicians and Associate Professionals*
4. *Clerks,*
5. *Service Workers and Shop and Market Sales Workers,*
6. *Skilled Agricultural and Fisheries Workers,*
7. *Craft and Related Workers,*
8. *Plant and Machine Operators and Assemblers,*
9. *Elementary Occupations,*
10. *Armed Forces*

For the analysis in this report, occupation has been grouped into the following broad categories:

*White Collar:* Major Groups 1+2+3+4

*Blue Collar:* Major Groups 5+7+8+9 – Minor Group 941 (agriculture, fishery and related labourers)

*Agriculture and Fishery Workers:* Major Groups 6 + Minor Group 941

*Armed Forces:* Major Group 10

**Sex Ratio**

Number of males per 100 females in a population.

**Singulate Mean Age at Marriage (SMAM)**

This is obtained by indirect method of estimating mean age at first marriage. This method is used to approximate the mean number of years lived by an assumed cohort of women before their first marriage on the basis of the data on the percentage never-married or single by age.

**Total Fertility Rate (TFR)**

The number of children that a woman would have in her lifetime if she followed a given set of age-specific fertility rates. The TFR is calculated by adding up the ASFRs and multiplying the sum by 5.

**Unemployment Rate**

The number of unemployed persons divided by the total number of economically active population multiplied by 100.

**Urban and Rural**

In all provinces, districts containing provincial headquarter towns are treated as urban areas. Krong Preah Sihanouk, Krong Kaeb and Krong Pailin are treated as entirely urban. In Phnom Penh municipality, the four districts or khands of Doun Penh, Chamkar Mon, Prampir Meakkakra and Tuol Kouk are classified as urban. All the remaining areas in the country are treated as rural.

**Codes for Column 3  
Relationship to Head of Household**

- 1: Head
- 2: Wife / Husband
- 3: Son / Daughter
- 4: Father / Mother
- 5: Grand Child
- 6: Other Relative
- 7: Non-relative

**Codes for Column 11  
Duration of Stay**

- 00: Less than 1 year
- 01: 1 to less than 2 years
- 02: 2 to less than 3 years
- .
- .
- 10: 10 to less than 11 years
- .
- 20: 20 to less than 21 years
- .
- 97: 97 to less than 98 years
- 98: 98 years and over

**Codes for Column 12  
Reason for Migration**

- 1: Transfer of work place
- 2: In search of employment
- 3: Education
- 4: Marriage
- 5: Family moved
- 6: Natural calamities or insecurity
- 7: Repatriation or Return after displacement
- 8: Visiting only
- 9: Other (specify)

**FOR ALL PERSONS**

FOR ALL PERSONS														
Literacy 13	Full Time Education 14			Main Activity 15	Employment Period 16		Occupation 17			Employment Status 18	Industry, Trade or Service 19			Sector of Employment 20
Can you read and write with understanding in any language?  1: Yes 2: No  <i>(Enter Code)</i>	(a) Have you ever attended School/ Educational Institution?  1: Never 2: Now 3: Past <i>(Enter Code)</i>	(b) What is the highest grade completed?  <i>(Enter Code from list below)</i>		Main activity during last year  <i>(Enter Code from list below)</i>	No. of months employed in the last 12 months		Name of Occupation			Employment Status / Class  <i>(Enter Code from list below)</i>	Nature of Industry, Trade or Service			Sector in which Employed  <i>(Enter Code from list below)</i>

**Codes for Column 14 (b)**  
**What is the highest grade completed?**

For Never in 14 (a) put dash ( - )  
For Now or Past in 14 (a), Code as follows:-  
00: No class completed  
01: Class 1 completed  
02: Class 2 completed  
.  
.  
11: Class 11 completed  
12: Class 12 completed  
13: Secondary School / Certificate / Diploma  
14: Undergraduate  
15: Graduate / Degree holder  
16: Postgraduate  
17: Other (specify)

**Codes for Column 15**  
**Main Activity During Last Year**

1: Employed (Fill in Cols. 16 to 20)  
2: Unemployed (Employed any time before)  
(Fill in Cols. 16 to 20 for last employment)  
3: Unemployed (Never employed any time before)  
**Inactive**  
4: Home maker  
5: Student  
6: Dependent  
7: Rent-receiver, Retired or other income recipient  
8: Other (Specify)  
(For codes 3 to 8, put dash ( - ) in Cols. 16 to 20)

**Codes for Column 18**  
**Employment Status**

1: Employer  
2: Paid employee  
3: Own - account worker  
4: Unpaid family worker  
5: Other (specify)

**Codes for Column 20**  
**Sector of Employment**

1: Government  
2: State-owned enterprise (Parastatal)  
3: Cooperative  
4: Private  
5: Other (specify)

**FORM B: HOUSEHOLD QUESTIONNAIRE PART 3: FERTILITY INFORMATION OF FEMALES AGED 15 AND OVER LISTED IN COLUMN 2 OF PART 2**

Sl. No.	Full Name	Sl No. in Col. 1 of Part 2	Fertility Information											
			4										5	
			Number of Children Born <i>(Give number in two digits like 01, 02,.....10, 11 etc. If none, write 00)</i>										Particulars of Birth in the last 12 months	
			How many children have been born alive to the woman ?				How many of them are living?				How many of them have died?		Any child born alive to the woman during the last 12 months? <i>(Give actual number like 1,2,.... If none, write 0)</i>

## GENERAL POPULATION CENSUS OF CAMBODIA, 1998

### Publication Programme

The following reports are proposed to be published as and when ready during 1999-2000:

1. Provisional Population Totals <sup>1</sup>
2. Final Census Results <sup>1</sup>
3. Report of the Post-Enumeration Survey<sup>1</sup>
4. The 1998 Census Tables for Cambodia and each of the 24 provinces (25 volumes)<sup>1</sup>
5. Village Gazetteer<sup>1</sup>
6. Organization and Administration of the General Population Census of Cambodia, 1998<sup>1</sup>
7. Census Analytical Reports:
  - (i) Fertility and Mortality<sup>1</sup>
  - (ii) Nuptiality <sup>1</sup>
  - (iii) Labour Force and Employment<sup>1</sup>
  - (iv) Housing and Household Amenities<sup>1</sup>
  - (v) Spatial Distribution and Migratory Movement of Population<sup>1</sup>
  - (vi) Population Projections <sup>1</sup>
  - (vii) Literacy and Education <sup>2</sup>
  - (viii) Women in Cambodia
8. Census Thematic Atlas

#### **CD-ROMs released so far**

CD#1 containing 47 priority statistical tables at country (total, urban and rural), province (total, urban and rural) and district levels with a total of 10,984 tables.

CD#2 containing data for more than 13,000 villages on age, sex, relationship marital status, literacy, school attendance, educational attainment and housing amenities. The product is in the format of DBF databases easily convertible into Access or Excel files.

CD#3 Census PopMap Applications

CD#4. Win R+ Population Database

CD-ROMs can be purchased from the Census Office of National Institute of Statistics at No. 27, Street 392, Boeng Keng II, Phnom Penh (Tel. 023 364658) or National Institute of Statistics in the Ministry of Planning compound (Tel. 016 832762).
